

Armor Your Pigs

with the Lissco System!

Drastically reduces swine dysentery & respiratory diseases.

The Lissco Waste Management System is One Powerful Pig Protector! Operations as small as 500 hogs or 100 sows can benefit. Lissco gives you stronger, healthier, more prolific pigs.

Aqua-Vac Air Inductor

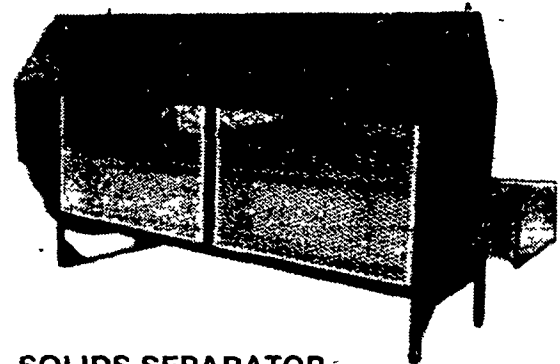

Respiratory problems in confinement operations are largely due to harmful gas build-up created by waste storage. The Lissco System removes that waste from the confinement barn and uses the Lissco Aqua-Vac Air Inductor to create a waste lagoon that is aerobic and thus controls annoying odors. The liquid from a Lissco lagoon is aerobic and sanitary. By having your pigs exposed to the aerated effluent, you'll receive another big benefit—immunities. The result is a herd with considerably fewer health problems.

Find Out More

Call Farmer Boy today and start to strengthen your herd health tomorrow. Armor your herd with the Lissco System: The Pig Protector.

Solids Separator

It's a clinically proven fact: refeeding reclaimed solids builds up natural immunities in the blood of gestating sows and is passed on to the pigs through the mammary glands of lactating sows; immunities that last throughout milk suckling. 3-5 day baby pig scours are virtually eliminated. By continuous refeeding of reclaimed solids, total herd health is improved. The immunities built up by refeeding affect a wide spectrum of bacteria. You can reduce your dependence on costly vaccines that affect only specific bacterial strains that are continuously changing.

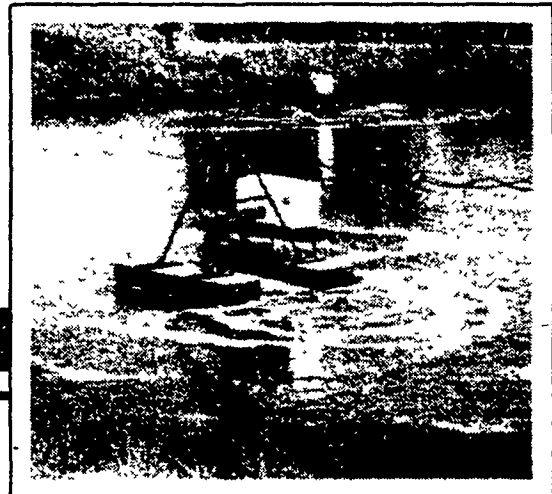

SOLIDS SEPARATOR

Unique design allows reclamation of over 80% of total waste solids, including important fines that are high-protein solids having a nutritional value similar to barley.

AQUA-VAC AIR INDUCTOR

Waste water is mixed with oxygen in the lagoon, creating an aerobic environment that breaks down and liquifies solids as well as controlling the odorous gases that often cause respiratory problems in confinement operations.
