# STOP THIS ROT.

**Anchor Sila-Lator 2X or Silage Inoculant 160X keeps out rot, seals in nutrients.**

Inside every untreated silo, pit and bale of hay lurks rot. The monster that eats protein and energy, leaving a trail of waste, nutrient loss and musty, stale forage behind it.

Now you can stop this rot with Anchor silage inoculants—Sila-Lator 2X for dry application or Silage Inoculant 160X for liquid. Both are proven microbiotic products that help preserve most types of silage—corn silage, haylage and high-moisture corn—and now baled hay.

With Anchor silage inoculants, you get the fastest protection possible against rot. That's because they contain a specially selected team of beneficial bacteria, aided by four enzymes, featuring something no one else has—*Streptococcus faecium* Cemelle 68.\* U.S. Patent No. 3,713,836

This patented bacterial strain beats rot to the punch, multiplying more than twice as fast as other strains. And, unlike other strains, it grows in highly preservative pH's as low as 3.2 in both hot and cold conditions.

With rot under control, you get more protein and energy, more dry matter, improved palatability, less heat loss and runoff. That's proven in leading university trials. So you can store your silage or baled hay longer, and get better-doing animals from better-quality silage or hay.

You might think that fighting rot is a costly battle. Not true with Anchor silage inoculants. It's less than a dollar a ton to treat silage. And it's only a fraction of the cost of acid preparations to treat baled hay. Application's also a snap.

Now's the time to control musty, rotten forage. And nothing does it faster than Anchor silage inoculants—for higher-protein, higher-energy silage and hay.
