38.00; few Medium 17.00-25.00.

October Milk Collects \$13.74 NEW YORK — Dairy farmers who supplied milk plants regulated under the New York-New Jersey marketing orders during October 1963 will be paid on the basis of a uniform price of \$13.74 per hundredweight (29.5 cents per quart), according to Market Administrator Thomas A. Wilson. He also stated that the price was \$13.75 in September 1963 and \$13.81 in October 1962. The uniform price is a marketwide weighted average of the value of farm milk used for fluid and manufactured dairy products.

The seasonal incentive fund returned a total of \$4,058.002.20, or \$.434 per hundredweight, to the dairy farmers' uniform price for October. This fund was generated by reducing the uniform price paid

to producers during the high-

MOLK MARKET NEWS

production spring months. A total of 17,324 dairy farmers supplied the New York-New Jersey Milk Market Area with 935,343,190 pounds of milk during October 1963. This was an increase of 5.4 percent (about 48 million pounds) from last year. The gross value to dairy farmers for milk deliveries was \$131,470,055.14. This included differentials required to be paid to dairy farmers but not voluntary premiums or deductions authorized by the farmer.

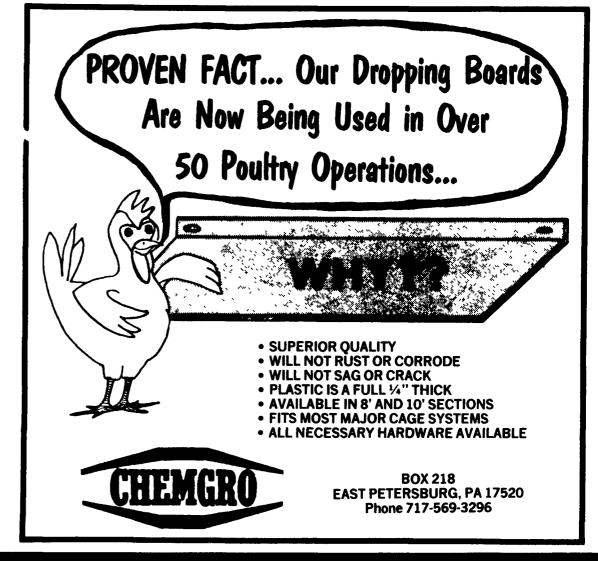

Regulated milk dealers (handlers) used 386,292,029 pounds of milk for Class I, 41.3 percent of the total. This milk is used for fluid milk products such as homogenized, flavored, low test and skim milks. For October 1963, handlers paid \$14.73 per hun-

dredweight (31.7 cents per guart) for Class I milk compared with \$14.69 a year ago.

The balance (549,047,161 pounds or 58.7 percent) was used to manufacture Class II products including butter, cheese, ice cream and yogurt. Handlers paid \$12.58 per hundredweight for this milk.

The uniform price is based on milk containing 3.5 percent butterfat. For October 1963, a differential of 17.0 cents was applied to the price for each one-tenth of one percent that the milk tested above or below the 3.5 percent standard.

All prices quoted are for bulk tank milk received within the 201-210 mile zone from New York City.

What is Custom Feed ogramming:

Custom feed programming is feeding recommendations tailored to meet the exact needs of your dairy herd. Its purpose is to help you attain top performance and maintain balanced nutrition.

It starts with your cows. Their breed, weight, and milking potential are the criteria used to determine their nutrient requirements. Next, the nutritive value and feeding rates of your home grown hay, silage, and grains are determined. Finally, the selection of the right young's premix is made to fortify your ration with the proper amounts of calcium, phosphorus, vitamins, and trace minerals important to good nutrition.

Once your custom feed program is set, your young's feed management representative will deliver the freshest possible product at regular intervals and will continually monitor your program's performance. The personalized service from your feed management representative will help you get every ounce of value out of your home

For more information about custom feed programming for your herd, contact your young's representative or write to: young's inc., R.D.#1, Box 71, Roaring Spring, PA 16673.
