

Bradford slates beef session

TOWANDA — Bradford County will hold an informational meeting for beef cattle producers on Tuesday at 7:30 p.m. in the Bradford County Extension Office located at 701 South Fourth St., Towanda.

The program will be presented by Clair Engle, Extension Beef

Cattle Specialist, and Dr. Tom Drake, Veterinary Science Extension.

Engle will speak on the topic "Improving Reproductive Efficiency in Beef Cow-Calf Herds". On an average, Pennsylvania beef cow herds wean only 83 percent calf crops. Failure of the cow to

breed is a main cause, but other contributing factors are dead or still born calves or death of calf within two weeks of birth. These factors take the profit from 4-5 cows who do wean calves to make up the loss from the one that doesn't. Cows do not always wean calves every 12 months but every 13-14 months. This is the same as an 85-92 percent calf crop

Dr. Drake, research assistant in the Veterinary Science department, will speak on the topic of "Livestock Health and Nutrition". The incidence and economic importance of diseases related to soil-plant-animal environment complex has increased with intensive, well-managed crop and animal

production. Critical health problems have even developed on very progressive farms. Losses due to infertility, metabolic diseases, and other beef cattle diseases due to nutritional imbalances and deficiencies are costing the livestock industry several million dollars annually.
