

Gooseneck introduced

LANCASTER — "Lancaster Level-Flo is introducing a new, large capacity, 12-inch gooseneck. The new design increases the size by 33 percent and may reduce forage wagon unloading time by as much as one half according to early reports.

The fully enclosed design is a distinguishing feature of the Lancaster Level-Flo gooseneck. This unique design assures that 100 percent of the forage going up the pipe enters the silo. The air pressure created by today's high speed blower is maintained up the fill pipe and on through the arc of the enclosed gooseneck. The forage is released inside the silo structure and the excess air is gently vented at a greatly reduced pressure.

The new gooseneck features a high, clean profile which reduces

friction as the forage goes through the arc of the gooseneck. Other features include a stainless steel liner and a vertical end section which eliminates any need for a funnel when center filling is demanded."

BALTIMORE, Md. — The Farm Credit Banks of Baltimore, the area's leading agricultural lending institution, has announced the election of James C. Cisney and Harold B. Short as Chairman and Vice Chairman, respectively, of the Banks' Board of Directors.

A native of Kentucky, Cisney has served on the Banks' Board since 1980. He is the General Manager of the Rockingham Cooperative Farm Bureau, Inc., in Harrisonburg, Va., and serves as a director of Valley National Bank, the Virginia State Feed Association, the Virginia Poultry Federation,

CHICAGO, Ill. — International Harvester Company has recently announced the availability of two new center pivot hydraulically driven Mower Conditioners. Available in 12 and 14-foot sizes, these new models offer many advantages.

Conditioning rolls are 106 inches wide. This enables the machine to produce either a windrow or a wide, fast-drying swath to help speed curing and avoid spoilage in humid climates.

Power-through slug removal is a new feature. When raised to their upper-most position, the con-

ditioning rolls separate to allow the operator to "power through" bunches or slugs (from the tractor seat) that would plug many other mower conditioners.

The sickle and reel are hydraulically driven so there is no power take-off shaft. The location of the center mounted tongue enables both the 12 and 14-foot models to be operated on either side of the tractor. This is an especially valuable feature when cutting on contoured ground or odd-shaped fields and makes maneuvering through narrow gateways easy.

Farm Credit names directors

and the Virginia Council of Farmer Cooperatives. Cisney also operates a 48-acre tobacco and hay farm.

Short operates a 250-acre farm in Georgetown, Del. on which 175,000 broilers are produced each year,

as well as corn, soybeans, barley and wheat. A member of the Banks' Board since 1982, he also serves as a director of the Delaware Federal Land Bank Association,
