

A hot and cold idea from Surge that can cut your milk room energy costs.

The new Surge W/A Condenser uses an exclusive combination of water and air cooling to save energy without wasting valuable hot water.

The Hot Idea.

A milk cooling system generates a lot of heat. This is a usable form of energy. Unfortunately, most air-cooled condensers waste it.

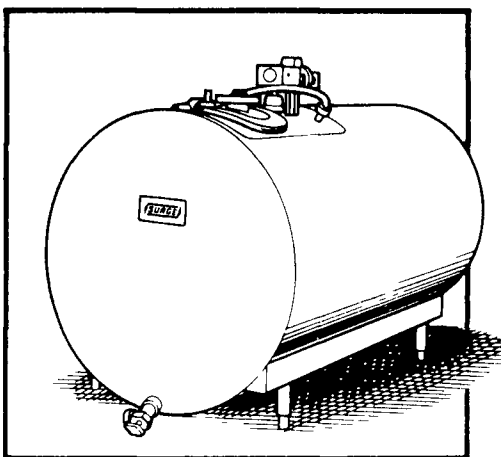

The Cold Idea.

Cold well water is much better than air for cooling a condenser. However, water cooled condensers often waste valuable hot water.

Water and air can reduce the cost of cooling your milk by as much as 20%. And the free hot water produced can cut your water heating bill by up to 80%. When you have enough hot water, air cooling takes over so you won't waste any.

Only Surge offers you this efficient, no-waste condenser.

The ARC* (Automatic Response Cooling) Tank saves you even more energy by activating your compressor only when you need it. ARC saves you as much as 20% in cooling costs over earlier models. Available in 500 to 3,000 gal. sizes.
