

The Model 6460 is one of three new self-propelled forage harvesters added by Fox Brady.

## Fox Brady adds harvesters

APPLETON, Wisc. — Fox Brady Division of Piper Industries Inc. has added three new models of self-propelled forage harvesters to its line of farm machinery. Designated as Models 6460, 6660 and 6860, the three new self-propelled models offer a wide range of horse-power for greater productivity and efficiency at harvest time.

Comments Don Campbell, Fox Brady Director of Marketing, "We like to refer to the three new additions as 'simplicity in motion' because Fox hydrostatic drive enables the operator to chop at top r.p.m. as he varies ground speed or goes smoothly into reverse. And the unique fingertip electronic controls operate all attachments."

Greater comfort so as to minimize operator fatigue has been built into all three models. The cab has been completely redesigned with such standard features as air conditioning, tinted glass windows and easy-ride seat.

All this combines with the fingertip electronic controls to give farmers the comfort and efficiency they require for a long day in the field.

All three models feature Detroit Diesel engines. The Model 6460 is equipped with a V8 4 cycle turbo charged power plant rated at 200 HP at 2800 RPM ... the Model 6660 is powered by a V6 2 cycle turbo charged engine rated at 277 HP at 2100 RPM ... the Model 6860 is powered by a V6 2 cycle turbo charged engine rated at 343 HP at 2100 RPM. Brakes are hydraulic — large capacity, combination disc-and-band type and steering is also full power hydraulic.

Optional features available include four-wheel hydrostatic drive for extra tonnage and more productive time in the field and a iron sensor that senses all ferrous metals, stops the feed rolls and attachment head so as to keep the metal from damaging machine or livestock.

# UNIPEL® 13-34-10

fertilizer can get your corn crop off to a super start:

It has a high concentration of water-soluble Phosphorus that gets to young seedlings quickly. Helps plants establish a good root system — the starting point for top yields. Its quick-acting and long-lasting Nitrogen team up to feed the young plants for full yield potential, continually from sprouting to harvest.

This is the Starter Special that corn growers know from good experience. It's highly effective as a banded starter. And it's SAFE... no chance of ammonia damage to tender, young seedlings when used as a "pop up" and applied directly with the seed at 50 lbs/acre

How can we fit UNIPEL 13-34-10 into your corn fertility program?
