

## Useful honey bees spotlighted at Montgomery Fair

GAITHERSBURG, Md. — Visitors to the 1984 Montgomery County Fair will have an opportunity to learn about the various ways that honey bees contribute to daily life.

Mr. Arthur Strang, superintendent of the honey and beeswax department, says, "Bees are critical to agribusiness as many crops are dependent upon them for pollination in order to produce fertile seeds. Crop yield can be drastically reduced if there aren't enough bees for pollination. Many farmers throughout the world rent

colonies of bees to ensure the best possible harvest".

Honey is used in many of our food products, cosmetics, and medicine. Many people prefer honey as a natural sweetener as an alternative to sugar. Beeswax is used widely in a variety of ways, including the making of candles.

Medical research continues into Apitherapy, the medical use of honey bee products. Medical science is investigating the use of honey bees' products in the treatment of arthritis. Even the venom of the sting has found a

wide variety of medical laboratory uses.

Honey lovers attending this year's fair will have an opportunity to buy some of the finest honey produced. There will be a variety of honey for sale: wildflower, tulip tree, and blackberry honey from Maryland; buckwheat

honey from Pennsylvania and New York; orange blossom honey from Florida; and sage honey from California.

The Montgomery County Fair begins August 20th and runs through August 25th at the Montgomery County Fairgrounds, Gaithersburg, Maryland.

## Milk down

HARRISBURG — Pennsylvania milk production during June totaled 814 million pounds, down one percent from last year according to the Pennsylvania Crop and Livestock Reporting Service. Milk production in the state during the April-June quarter totaled 2.4 billion pounds, one percent below the comparable period in 1983. The number of milk cows in the commonwealth during June averaged 720,000 head, down 11,000 head from a year ago. Milk production per cow averaged 1,130 pounds in June, up five pounds per cow from a year ago.

Grain and other concentrates fed to milk cows in the commonwealth on July 1 averaged 14.7 pounds per head, up one-tenth of a pound from July 1983. The value of grains and other concentrates fed to milk cows on July 1 averaged \$9.20 per hundredweight, up 90 cents from last year.

United States milk production during June totaled 11.8 billion pounds, four percent less than May 1984, and four percent less than June 1983. Milk production for the quarter totaled 35.8 billion pounds compared with 36.9 billion pounds during the second quarter a year ago. Total milk cows in the United States averaged 10.9 million head during the April-June quarter, down two percent from a year ago.

Grain and other concentrates fed to milk cows throughout the country on July 1 averaged 14.9 pounds, down eight-tenths of a pound from July 1983. The value of grain and other concentrates fed to milk cows on July 1 averaged \$8.46 per hundredweight, 66 cents above a year earlier.
