HARRISBURG — The Pennsylvania Farmers Union has added Cheryl L. Cook to its staff as Communications Coordinator. Her responsibilities will focus on lobbying in the state legislature, maintaining contact with PFU membership through a monthly newsletter, and writing news releases.

N.J. sheep show slated

AUGUSTA, N.J. — The second annual "Shepherd's Harvest Fair", sponsored by the Wool Sheep Breeder's Association of New Jersey, will be held next Saturday and Sunday at the Sussex county fairgrounds in Augusta, N.J.

The fair will be held in conjunction with the Sussex County Farm and Horse Show Livestock Building Committee's "Oktoberfest" and both events expect to draw 4,000-5,000 people from the metropolitan area.

This is the first time the "Oktoberfest" and the "Shepherd's Harvest Fair" have joined forces to produce a weekend of Bavarian music, ethnic foods, wool and country crafts, sheep shows, spinning and weaving contests and a wool fashion show.

A major attraction of this fair is the craft show and sale. Spinners, weavers, dyers, knitters and felters join other artisans from up and down the eastern seaboard in displaying their talents. A variety of craftpersons, such as potters,

basket weavers, quilters, stencilers, herb growers, loom makers, woodcrafters and many others will be exhibiting.

Wool fashion is a keynote in this year's fair. Both adults and children will compete in the Shepherd's Lead contest, a fashion show in which contestants show off the qualities of wool. Many outfits will be handspun, woven and sewn by the contestants from their own sheep.

The two day event will feature a white and colored wool sheep show and purebred sheep shows. Warren Brannen from New York will judge both the fleece and sheep shows.

Wehr

(Continued from Page A1)

herd of 50 registered and grade Holsteins. Wendy is the daughter of Karl and Hertha Wehr of Mifflinburg.

Wehr was active in 4-H and Extension activities in Union County. She worked as a program assistant at the National 4-H Center in Washington, D.C., and traveled as an International 4-H Youth Exchange Representative to Egypt and Israel in 1981.

In her free time, Wehr enjoys photography, traveling and outdoor activities.

Now is the Time

(Continued from Page A10)

After cleaning out the bin, it should be sprayed with a mold inhibitor and allowed to dry. You can use calcium propionate solution as the inhibitor, at the rate of 2 ounces per gallon of water for the spray. One of the best ways to prevent this condensation problem is to insulate the bin. The insulation will slow down the temperature fluctuation.

To Stop Fertilizing Trees and Shrubs

The time is here when we should not be applying any fertilizer to rose bushes, trees and shrubs. The season's growing period is about over and new growth should have a chance to harden before cold weather arrives. When we fertilize during the fall we encourage new growth, which will be tender, and will winter-kill in zero weather.

It is best to wait until early spring to apply any plant food to these types of plants. Mulching is a good practice to help conserve moisture and control weeds, but keep the fertilizer in the bag until the 1985 season.

The Penn State Extension Service is an affirmative action equal opportunity educational institution.

PFU adds staffer

A native of New Jersey, Ms. Cook is a 1981 graduate of Lebanon Valley College and a 1984 graduate of the Dickinson School of Law.

The Pennsylvania farmers Union represents over 5000 members in 31 chartered county organizations.

Ideal For Baling Corn Stalks!

M&W ROUND BALING SYSTEM

FARMING'S FINEST ROUND BALING SYSTEM

M&W balers were engineered without belts or multiple rollers. M&W balers form bales using an endless slatted steel chain conveyor that rolls, forms and presses the hay inside a closed chamber. The frequent breakage and time consuming replacement of belts is eliminated. This simple design runs quieter and cleaner with one-third fewer parts than most conventional round balers.

The enclosed fixed cavity holds in leaves and seeds, reducing crop losses experienced with "open chamber" style balers. Even during twine wrapping, where many balers suffer additional crop loss, M&W experiences almost none. M&W's closed bale chamber also eliminates noise and dust problems. M&W balers utilize four rows of rotating double-spring tines that pick up the crop cleanly. Proper working height of the pick-up is easily pre-set with an adjustment pin.
