"Twist-Lock" cups: newest innovation from the new leader

...another reason SWISH saves you more labor, more birds, and more money

The newest twist in cage watering makes cup cleaning and maintenance a real snap - it's SWISH's Twist-Lock cups for cage layers and brood-grow watering systems

Saves labor. No more contortions with hand tools inside a cage - one simple twist of the wrist unlocks and removes the unitized cup and valve. It's that easy to maintain when necessary.

But with SWISH it's hardly ever necessary. That's because our cup is self-cleaning. Our patented valve keeps the cup clean by flushing any feed particles out so birds can consume them with the water.

Installation is a snap too with SWISH's new cups - they simply snap into the desired location and the hose attaches to the water line outlet. These are some

of the ways SWISH's new cup saves you labor - easy installation, low maintenance and labor savings between flocks because our cup constantly cleans itself.

Helps save more birds. Because our cup is self-cleaning, algae and bacteria growth is not a problem as with cups that don't flush out feed particles. Clean cups mean less chance of disease and less mortality. And our big cup means good access to water for a good level of bird health.

SWISH saves you money. That's the bottom line with a system that cuts labor and keeps birds alive and productive.

Get all the facts about our new cup and other SWISH innovations. See your SWISH distributor or contact us.

PATENTED VALVE IS KEY TO OUR PERFORMANCE

Orifice (A) forces water onto deflector (B). Lip (C) diverts it down to suspend feed (D).

The NEW SWISH - total commitment to quality & service
