

USDA-DHIA Active AI Sire Summary

BELTSVILLE, Md. — The January 1985 USDA-DHIA Active AI Sire Summary is listed on the following pages. Summaries have been calculated for all bulls reported active by artificial-insemination (AI) organizations as of January 22, 1985, with 10 or more daughters. Note that all transmitting abilities are ex-

pressed as deviations from the 1982 genetic bases and are labeled PD82.

The Active AI Sire Summary contains Predicted Differences (PD) for both yield and percentage for all three milk components — fat, protein, and solids-not-fat (SNF). Beginning with the

January 1985 run, the Repeatability requirement for a bull to have his protein and/or SNF Summary released was lowered to 25 percent for bulls born in 1978 or later. The Repeatability requirement for bulls born prior to 1978 was kept at 40 percent.

The PD dollars (PD\$) is based on a milk price of \$12.20 per hundredweight of milk with 3.5 percent fat and differentials of 17.4 cents for fat, 12.4 cents for protein, and 8.7 cents for SNF. This was the U.S. average milk price for 1984 minus the average hauling and Government assessments.
