**YORK** Pennsylvania farmers will benefit greatly from an innovation in crop insurance now being offered by the Federal Crop Insurance Corporation (FCIC), according to Feggyann Carnill, County Executive Director.

It's called Actual Production History (APH), and I think it's going to make the difference for a lot of farmers in our area," Ms. Carnill said. In a nutshell, APH simply means insurance guarantees will be based on individual yield histories rather than county or area averages as was previously the case," Ms. Carnill added.

One thing that also came through loud and clear was the importance of farmers maintaining accurate acreage and production records. With such records the above-average farmer (an generally expect to get a higher yield guarantee at a lower price than under the old program," Ms. Carnill said. Farmers with no records can still obtain insurance, but must report their acreage and production on an annual basis. Yield guarantees in succeeding years will be based on those records to the extent which is appropriate.

FCIC recently expanded the APH program to include corn, grain sorghum, tobacco, and peanuts for the 1985 crop year. Cotton and rice were included in the program in 1984. All crops will be under APH by crop year 1987.

Ms. Carnill learned about the insurance plan during a recent

FCIC training conference called to further explain benefits of the APH program to USDA officials and private insurance industry officials who will be responsible for APH training.

Secretary of Agriculture John R. Block recently told a national conference on the APH program in Nashville, Tennessee. Secretary Block said, "We have turned the crop insurance program into the number-one risk protection device available to all farmers. And it will remain the number-one program to help farmers reduce their risks."

By replacing the old county

average yield system with a system of actual production history, farmers will at long last receive production guarantees commensurate with their proven ability to produce," Block said.

Without this very fundamental change, I am convinced that crop insurance would have remained stagnant for years. With it, I am confident that the future of the program is very bright."

Farmers wishing to discuss the APH program and how it can improve their risk management needs, should contact the local ASCS office or crop insurance agent.

## FCIC to base insurance on actual production history

### Small fruit seminar

**WASHINGTON, Pa.** - If you are interested in berry production, you'll want to attend the third annual Regional Small Fruit Production Seminar scheduled for Monday, Mar. 11 at the Holiday Inn, 340 Racetrack Road, Washington, PA (Meadows Racetrack). The meeting will run from 8:30 a.m. until 4 p.m. To reach the Holiday Inn, take Exit 8 off I-79, just north of Washington.

Seminar presenters include three Penn State faculty members: Carl Haeseler, professor of pomology; Don Daum, professor of agricultural engineering extension; and Roland Daniels, associate professor of environmental horticulture. Also on the program are Robert Pollock, Beaver County Extension agent; and Richard Funk from Ohio State.

The speakers will discuss marketing and promotion, bird control, table grapes for this area, and planting systems for brambles, and will offer updates on small fruit research, insects and diseases. In addition, a trade show will feature suppliers of machinery, chemicals, irrigation equipment and more.

The Regional Small Fruit Production Seminar has been highly successful in the past, attracting growers from across eastern Pennsylvania, northern West Virginia and eastern Ohio. Don't miss it if you are interested in berry production. For reservations or more information contact the Westmoreland County Extension Service, P.O. Box 250, Greensburg, PA 15601, or telephone (412) 837-1402.

**If the engine quits, two-way radio could pay for itself today.**

Lose just one day during the planting season and it could make all the difference between a good crop and a poor one. That's why you should be equipped with a Johnson FM two-way radio.

With two-way radio if your engine quits you can simply call for help. Chances are a mechanic can get to you and get you going again while there's still some daylight left.

But without two-way radio you'd just have to start walking. There are a lot of other ways Johnson FM radio can save you time and money. Why not let us show you how you can lease or own a complete two-way system for as little as 75¢ a day.
