\$64.80 Per Bushel
Med. Flat - Med. Round

The price in last weeks ad of \$54.80 was incorrectly published by Lancaster Farming. The correct price is \$64.80 as published this week. Lancaster Farming regrets this error.

Description of Single Crosses

89X-C 120 Days NEW, NEW!!-SUPER CHOICE!!

The new 89X-C has all the ingredients needed for top yields. Tests over the past three years shows better standup and higher average yields. Resistance to leaf diseases and drought shows marked improvement. Ears are medium long and girthy with very deep kernels set on a hard cob.

78X-A 114 Days NEW!!-SUPER "A"

The new "A" Version of 78X shows much improved leaf disease resistance which in turn helps standability. Also the "A" retains the big easy husking ear and the ability to make record yields. Very impressive on farms in '83. Responds to thinner planting with bigger ears!! Drought tolerance at a high level.

70X-A 112 Days VERY HEALTHY-SUPER YIELDER

The new A version of 70X shows improved yields, better plant health and a stiffer stalk. The ear height is also lower. Has a good sized ear of deep yellow kernels, ideal for picking or shelling. Excellent resistance to Northern Leaf Blight. A really super "A" hybrid!!

60X-A 100 Days POPULAR AND ADAPTED-BRIGHT FUTURE

An improved 60X, this "A" version is shorter in the stalk, stands better and still retains the yielding ability of 60X. Does especially well as an early corn in the longer season areas. Has a good sized ear both in length and girth. Deep kernels for combining. Doebler's most popular 100 day hybrid gaining in popularity by leaps and bounds!!

59X 98 Days BIG EAR TYPE-RECORD YIELDS

59X has a medium tall plant, is highly resistant to leaf diseases and has a big easy husking ear. Ear size will greatly expand at lower populations. In competition with 36 hybrids, 59X took the top yield in '82 Penn State Commercial Corn Trials (Early Med. Season) with 152.2 bu. dry shelled corn per acre!

48X 90 Days EXCITING -YIELD CHAMPION

This new hybrid has a medium height stalk, is an excellent stander and is tops in its maturity for yield. In the 1981 Penn State Commercial Corn Trials (early area, 10 locations) 48X was the top yielding hybrid, a full 23 bu better than the test average. In '82, again 48X was not to be outperformed. It yielded 135.4 bu., 18 bu. better than the test average!!

38X 85 Days HIGH YIELDS-EXCELLENT STANDER

This single is an early version of 48X and fits those who need something earlier. Stalk is stiff and short. Kernels are deep for its maturity. Will stand thick planting and higher applications of fertilizer.

Proof of performance of Doebler's Hybrids is just a matter of record. Those who study the unbiased university corn yield trials know just how outstanding and consistent Doebler's Hybrids really are!! And last but not least, the record shows that farmers plant Doebler's Hybrids in increasing numbers each year.
