Paymaster announces new seed varieties

MINNEAPOLIS – Four new corn hybrids, two new sorghum hybrids and a new soybean variety have been announced by Paymaster Seeds for the 1986 planting season.

John Buman, Paymaster Seeds vice president and general manager, provided the following description of the new line-up:

Paymaster 1120 has high yield potential for the northern Corn Belt. Relative maturity is 80 to 85 days. Plants are medium-tall with medium-low ear placement. The hybrid has very good stalk strength and root quality. It also has medium-hard kernel texture with very good harvestability. Research data indicates the hybrid has excellent stress tolerance. Paymaster 1140 has high yield potential. The hybrid produces medium-long ears with deep kernels on a small cob. The 90-day relative maturity hybrid is known for fast drydown.

Paymaster 1690, a 95-day relative maturity hybrid, has exceptional performance potential. Ears are medium-long and girthy with deep kernel set. The medium-tall hybrid is an excellent choice for grain production or high-quality silage.

Paymaster 7989 is a medium-tall hybrid with a very dense leaf canopy. Standability of the 117 to 119-day hybrid is very good. It is adapted to a wide range of growing

conditions and is a good dualield purpose hybrid for grain or silage. aces Paymaster 1096y is a widely eep adapted, full-height grain sorghum day hybrid with superior yield own potential. It has large, semicompact heads with yellow or

cream-colored grain. The hybrid has good appearance with very good field uniformity.

Paymaster FS 466 is a fullmaturity forage-sorghum hybrid with high grain yield potential. It is exceptionally leafy, with a

moderately juicy and sweet stalk. Plants range in height from eight to nine feet under favorable growing conditions.

Paymaster 214 is a new early Group II soybean variety. It is recommended for areas where iron chlorosis is a problem. The variety grows to a medium height with a medium bush canopy.
