TIMPTE  
LIGHTWEIGHT  
GRAIN HOPPER  
NOW**

**Got Grain? Then get the trailer that is Timppte tough... the Super Hopper. It's not only built to take it...it's also built to cut fuel costs. The Super Hopper is lightweight and aerodynamically designed to reduce wind drag. When there's grain to be hauled, Timppte does the haulin' best and pulls a lot easier than the rest.**

## Chore-Time develops alternative to chain feeding for poultry

\* MILFORD, Ind. - For many years, the caged layer industry has looked for an economical alternative to the chain feeder. With the release of the new ULTRAFLEX™ Cage Feeding System by Chore-Time Cage Systems, the industry may now have that alternative.

According to David Newman, general manager of Northeast Agri Systems, distributors of Chore-Time Cage Systems in the Northeast, the new ULTRAFLEX System is designed for use with caged layers and brood-grow systems. The unique system delivers feed to the birds in cage rows up to 600 feet in length by using a round, flexible steel auger pulled through the feed trough by a sprocket drive. The "coreless" auger permits easy access to the feed—even for poorly debeaked birds. The auger also helps guard against the bird's natural instinct to bill or pile feed in the trough, which can cause feed to spill out and be wasted.

"Actually, the ULTRAFLEX was designed for several reasons, with differences in feed formulations being the primary consideration," Newman noted. "The system quickly moves fresh feed around a continuous circuit at 80 feet per minute without feed separation, roll back or skipping. The auger speed also prevents birds from selectively eating or 'high-grading' the feed as it passes by them."

"The system is simpler to operate than most other systems and is easily adaptable to most existing cage systems. ULTRAFLEX is also more forgiving of factors such as feathers and corn cobs in the feed and house managers who will not tend to and adjust equipment," he added. And, the ULTRAFLEX auger glides around corners in heavy duty galvanized steel elbows eliminating the need for power shoes, corner wheels, wear plates, or shear pins. Both the ULTRAFLEX auger and 20 gauge high tensile steel feed trough feature a five-year warranty.

The ULTRAFLEX System also uses Chore-Time's advanced microprocessor time clock to provide various features, Newman pointed out. "The feeder's running time can be set to the second,

matching the exact time it takes the feeder to move feed completely around the cage row. The clock can also be set to provide one or more "stimulation cycles" between feedings. Each stimulation cycle allows the ULTRAFLEX to run 10 seconds, moving the auger to stir feed and stimulate birds to eat between feedings.

Newman also notes that while the system has just been released by Chore-Time, the ULTRAFLEX System has been tested on poultry farms for over five years with several million birds being fed on systems already installed in the United States, Canada and Europe. During the past year Northeast Agri Systems has sold and installed several ULTRAFLEX Systems in Pennsylvania, Virginia and New Jersey and currently has more installations in progress.
