

Deutz-Allis introduces Rotary hay equipment line

MILWAUKEE, WI - Deutz-Allis recently announced the introduction of its new "Rotary" line of hay harvesting equipment, according to Jerry Oxborough, Product Manager for hay equipment.

"Today, we can fill the need of hay harvesting demands for mowing, mowing-conditioning, tedding, raking and baling, whether the need is square or round bales", said Oxborough.

Here are the highlights of this system:

and formed in a clean swath perfect for quick drying.

SM 70 Pull-Type Mower Conditioner

For high-capacity minded operators, the SM 70 10 1/2 pull type is the answer. Available with a choice of either the intermeshing roller conditioner for legume hay or the tine conditioner for grass hay. Both models have adjustable swath forming shields and lateral header flotation.

KS 1.50 and KS 200 Rotary Rakes

Rotary raking action means fluffy windrows and this promise is kept with the KS 1.50 and KS 200 Rotary Rakes. With tine arms supporting three dual springs tines on each arm, there's no wasted motion. Hay is raked across the stubble into neat windrows without the twisting effect of conventional rakes.

KH 300 and KH 500 Rotary Haymaker Tedders

These rotary haymaker tedders can reduce drying time by up to

another 50% during high-moisture haymaking conditions. They gently scoop up flattened hay and remove the waxy coating from the

stem for fast drying. These rotary tedders are available either as pull-type or mounted.

KU 250 DN

Rotary Haymaker/Rake

This rotary haymaker/rake is a tool that does the work of two by tedding and raking. Tedding can

be done early followed by raking perfect windrows. This combination tool fits many medium-sized hay operations.

490 Rectangular Baler

When it comes to packaging hay, this baler is designed to handle over 6' wide windrows at a rate up to 23 tons of hay per hour. Bales are uniform and well-shaped with high density for long-lasting strength. The plunger assembly glides smoothly on 10 sealed roller bearings at 100 strokes per minutes.

GP 2.30; GP 2.50 and GP 2.80 Round Balers

These are fixed-chamber round balers that build bales that have quality and a high-density outer

wrap. The constant-size rolling chamber creates bales with a smooth, firm outer shell and permeable core, allowing moisture from condensation or storage to dissipate freely. All models feature automatic bale twine wrap, automatic chain oiling, and bale discharge bar.

"These quality haying tools are new to North America, and are field-proven in Europe," Oxborough said. In fact, they have become the world's largest selling line of rotary hay equipment, he adds.

The new Deutz-Allis KM25 drum mower creates a powerful vacuum effect to stand up wet hay.
