REAP THE BENEFITS

Yield Trak Monitors four basic functions ground speed, acres harvested, bushels per acre and total bushels harvested. The bushels per acre function is divided into two counters with independent resets, so you can pinpoint yields with each tank-full or measure an entire field

Yield Trak provides the information you need at harvest to operate at maximum efficiency and make the best possible decisions for next season's crop

- Record exact number of acres harvested
- Increase productivity through accurate monitoring of ground speed
- Establish yield records for each field or soil type
- Assess the effects of weeds or insects on yields
- Determine next year's fertilizer and chemical requirements
- Measure yields from test plots to determine best performing varieties
- Establish a more accurate grain inventory
- Load trucks within legal limits

Yield Trak can be used with any make or model of combine and calibrated to accurately measure corn, soybeans, wheat and other small grains. Whether you run your own farm or do custom combining, efficient operation is more essential than ever. Yield Trak eliminates the guess work that can cost you time and money

*Low Cost -
Easy-to-Use*

*Accurate yield
measurement with
each tank unloaded.*
