going to give the farmer any aid, give it to him in proportion to his needs."

How do the HARRISES plan to weather this crisis? The farm has been in the family for five generations. Gene's son John and Bill's son David are the fourth generation to milk cows there. Gene describes the family as conservative managers and with some reserve funds they have saved, they hope to be able to keep themselves debt free. He also credits a strong milk market with a local supermarket chain as a bright spot in the picture. Despite the stress of heat and changes in the feed program, their cows are still averaging 41 pounds a day of 4.6% milk.

However, the prognosis is still grim. Harris states that they are just riding a bubble in regards to their equipment which has not been updated in recent years. And despite his strong milk market he still feels dairymen have hurt themselves in pricing their product. States Gene, "The price of our product is not set to absorb any extra burdens like this."

And what about next spring? Projects Harris, "Everything is riding on stored feed. By next spring, milk production will drop and feed prices will be even higher. Farmers have to do their best job of planning for their own needs as possible, because you can't count on the government. Who knows what the Government is doing from one day to the next?"

Theme Is "Water Quality"

(Continued from Page A1)

water quality. APD visitors will be able to see the differences in water through microscopes.

• Home Lawn Pollution— Is runoff from fertilizer and other home lawn applications a problem? Should we be concerned?

Conservation Education tours will leave every 20 minutes from 10 a.m. to 3 p.m. daily.

Woodland management tours will leave every hour from 10 a.m. to 3 p.m. daily.

Soil and water conservation practices will be stressed on the tours of the conservation research area. Demonstrations will include various ways to reduce erosion and improve water quality.

Other new conservation activities include:

• The state mobile soil and nutrient testing van. The van will

be located next to the conservation education tent. Visitors can see how the van is being used to promote better conservation practices.

• The conservation education tent will be devoted mainly to the impact of agricultural activities on the Chesapeake Bay. Exhibits will focus on the effect of various agricultural practices on water quality.

• Visitors can see cattle grazing on newly planted warm season grass plots. Visitors can also see how Penn State and Soil Conservation Service scientists and engineers are managing surface water around sinkholes.

• Woodland tour activities will be greatly increased this year, primarily to highlight the "Year of the Forest" programs. There will be harvesting and skidding demonstrations and a portable sawmill.

One Gallon Of BARRIER® TEAT DIP

(Value \$15.95)

FREE

During Ag Progress Days
Tues., Wed. & Thurs. - August 19, 20, 21

BARRIER, The Pure, Natural Latex Teat Dip With Proven Advantages

Faster Drying - Longer Lasting - Simply Removed
No Mess - No Fuss

• **BETTER COVERAGE**

BARRIER's special formulation of pure latex provides a heavy, uniform seal around the teat and teat canal to help protect against the entry of bacterial organisms known to cause mastitis. Protects injured teats, too.

• **LABORATORY & FIELD TESTED**

• **EFFECTIVE**

Antibacterial
Antimicrobial
Germicidal

• **EASILY IDENTIFIED**
BARRIER teat dip has an aqua-blue color

IDEAL FOR PROTECTING DRY COWS
