

Because every farm is different, we develop different alfalfa varieties.

Your farm is different from that of your neighbor; different soil types, perhaps, or different disease and insect problems. And that may be the best reason yet for using Pioneer® brand alfalfa in your individual alfalfa management program.

Thanks to our large and continuing alfalfa research effort, you have a number of different varieties to choose from. There's one that will fit your farm better than any other variety you can buy; and that's the one you should be planting to maximize your long-term alfalfa yields.

Which one? Well, your Pioneer sales representative will be glad to match one of these varieties to your farm conditions and help you start getting more alfalfa from every field on your farm. So give him a call. He's right down the road.

526

One of the most winterhardy varieties on the market. It features outstanding resistance to Bacterial Wilt, good resistance to Fusarium Wilt and produces impressive yields. The first cutting is a bit later than with 531 or 532.

531

Tolerates Anthracnose infestations and fights off Fusarium and Bacterial Wilt. First cutting is early, and the fine stemmed, leafy plants bounce back fast after harvest.

NEW 5432

With excellent resistance to Verticillium Wilt and Phytophthora Root Rot, 5432 delivers extra tonnage for hay or silage. It has fast regrowth, early spring recovery along with very good winterhardiness and excellent seedling vigor.
