DICKEY-john DjGMT Grain Moisture Tester

The DICKEY-john Grain Moisture Tester measures moisture content automatically. You don't have to preweigh the sample. There are no meters to read, no dials to set, and no thermometers to lose. As soon as you pour in the grain sample, the testing sequence begins. A digital readout is displayed when the proper weight of the sample has entered the test chamber. The readout is corrected for temperature at the touch of a pressure sensitive switch. Models are available with direct readouts for corn, soybeans or wheat, and adhesive conversion charts are provided for other grains.

- **GRAIN MODEL**
 List...\$259
 CASH.....\$185
- **FORAGE MODEL**
 List . \$310
 CASH.....\$215

Simple, four-step operation

1 Place the tester on a steady level surface. Then lift the protective cover up and slide it down out of the way.

2 Use the sample cup to pour grain into the testing cell. Pour slowly and steadily taking about eight to ten seconds to empty the sample cup. A readout will appear automatically.

3 Wait at least fifteen seconds. Then press the temperature compensation switch for a direct readout of the moisture content of the grain listed on that switch. Refer to the appropriate chart for other grains.

4 Empty the tester by turning it over (if you should forget to empty the test cell, the tester will shut itself off automatically after two minutes).
