

BLADEX. CONSISTENT WINNER IN NO-TILL.

If growers who practice no-till corn farming were polled and asked why they preferred BLADEX® herbicide, chances are they'd answer with one word: Consistency.

Because no other herbicide works as effectively to kill weeds two ways. First, BLADEX burns down weeds in heavy no-till residue. It's more consistent than hit-or-miss contact-residual combinations, especially when applied in liquid N carriers. (Saves money on expensive contact materials.)

Then, through its effective root-uptake action,

that one-shot application of BLADEX continues to give season-long control of later germinating weeds. Including tough grasses like foxtails and fall panicum. More consistent performance regardless of weed, weather and soil conditions. BLADEX stands behind its performance. Backed by a performance agreement, BLADEX assures commercially acceptable weed control. See your participating dealer for details.

Learn more about why the Corn Belt is switching to BLADEX. Isn't it time you switched, too?
