TINE
HARROW

The perfect tool for ridge and minimum till

The Fuerst harrow cleans ridge tops, creating excellent seedbed. Unique "Spreading Action"® tines hug the soil at faster speeds to shred and evenly spread no-till stalks in the spring.

Dozens of uses:

The harrow used behind a disc or cultivator, incorporates herbicides in one pass. Used alone, it covers broadcasted seed, renovates, maintains pastures and more.

The harrow/cart (an optional harrow carrier as shown) follows tight turns, has folding wings for easy transport. Harrow and cart are available in 16 to 42 ft. widths.

"I believe the harrow works as good as a stalk shredder; it lifts and shatters the stalks and yet doesn't tear up the ground."

Roger Bommer--
Brookville, IN

Free swinging tines
Fuerst's free swinging "Spreading Action"® tines make it the ONLY harrow that can effectively incorporate and shed trash

balance this forage. The cow is basically a ruminant animal and depends on forage for feed. You are getting your return on your forages as you process them through the cow. So our major factor is how do we balance the grain versus forage?" Wile said. "We have a limiting factor related to the amount a cow can eat. The considerations you need to look at include: energy pounds, fiber percent, forage dry matter, moisture, number of feeding times, days in milk and milk pounds. The dairyman's biggest opportunity for increased production and income is to balance grain and forage," Wile

said. "If your high-producing cows stallout or fail to peak properly, you may have created a fiber problem by overfeeding grain. You need to have an accurate program where you program for energy on the energy-balanced cows and you program for fiber on the energy deficient cows," Wile concluded.
