IMPROVE HERD HEALTH

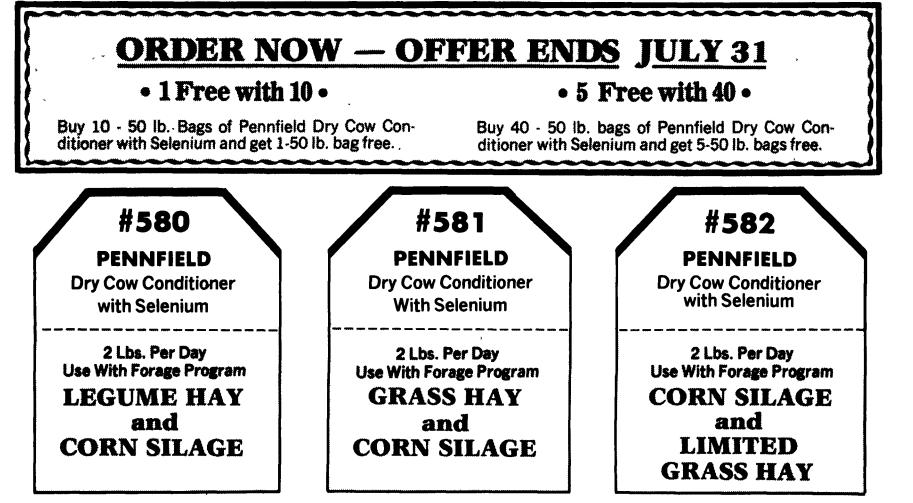

28° Per Day - provides her with a daily diet specifically formulated for pre-freshening cows.

Pennfield Dry Cow Program

The 60 day period before freshening is a most important time in the life cycle of the cow. During the period she will "store-up" vitamin, mineral, and energy reserves which she will draw on during her following peak of lactation. Over 50% of her calf weight will devleop during this period, and being a good mother, she will supply nutrients to her calf before she will rebuild her own body reserves.

Good dairymen have seen that proper feeding management during this critical-period, means easier calving, better appetite during early lactation, and cows breed back better because they have nutritional reserves to draw on during peak lactation.

Balanced Nutrition Is The Key

A properly formulated dry cow program allows the dairyman to "control" the nutrient intake of the cow. Calcium and phosphorus levels must be properly maintained and forages should be checked for protein, energy, calcium and phosphorus.

Pennfield Offers You

• Forage Testing--

Pennfield customers receive "no charge'' forage testing at our laboratory located in Lancaster, Pa.

• Dry Cow Program --

A printed feeding program shows correct quantities of forages to be fed along with 2 lbs. of Pennfield "Dry
