MF TRACTOR HEADQUARTERS

New M-F over-100 hp "thinking tractors" help you farm even smarter.

The M-F 3600 Series tractors from Massey Ferguson give you all the revolutionary advantages of the latest micro-chip technology ideally matched to the increased output of a larger Perkins engine. Result? More powerful thinking tractors to give you more productivity than you ever thought possible.

It starts with the proven 354 cubic inch (5.8 liter) turbocharged Perkins diesel delivering 115 PTO hp* in the M-F 3630 and 130 PTO hp* in the turbocharge/cooled M-F 3650. This power is delivered through a full synchromesh transmission featuring two speed Powershift and reverse shuttle plus your choice of two or four-wheel drive.

Now for the first time ever this muscle power is combined with Autotronic™ and optional Datatronic™ systems to automate numerous routine tractor operations while giving you unique electronic wheelslip control and comprehensive performance monitoring.

Add the speed and precision of Electronic Linkage Control and the ultimate comfort of a "Silent Revolution" cab and you have the most productive tractors around in their horsepower range — the new M-F 3630 and M-F 3650.

Manufacturer's rated

You'll enjoy spending the day in a "Silent Revolution" cab.

Once you've experienced the comfort and conveniences of an M-F 3600 Series cab other cabs will feel inadequate. An obvious difference is how easy it is to get into and out of the cab thanks to large, rear-hinged doors for straight entry or exit. Flexible mounting to lessen vibration and extensive use of sound-deadening material has reduced noise level inside the cab to the mid 70 dBA range.

Large windows in all directions ensure clear visibility. You'll also love the swivel seat with parallel suspension and the tilt/telescoping steering wheel. All controls are right at hand while an exceptional climate control system surrounds you with fresh or recirculated air — it even brings warmed or cooled air to your feet.

Autotronic™ system improves productivity while reducing fatigue.

Before you even brake when making a turn at the headlands a small on-board computer automatically disengages the differential lock as you raise 3 point hitch mounted implements then re-engages it when you lower the implement.

If you engage the differential lock manually 4WD is also engaged automatically. This gives maximum traction and output in any condition.

When you use the independent brakes for pivot turns the Autotronic system makes sure the differential lock is disengaged automatically.

The Autotronic system senses the load on the PTO and automatically engages the clutch smoothly and progressively preventing clutch and implement damage.

As soon as you apply the brakes under any conditions 4WD is automatically engaged for effective four wheel braking and to ensure maximum control.

Whenever your tractor exceeds 8 mph (14 kph) the Autotronic system automatically disengages 4WD for better fuel economy and reduced tire wear. And whenever speed drops below this level 4WD is re-engaged.

WE HAVE FOUR OF THESE RENTAL TRACTORS AVAILABLE AT REAL BARGAIN PRICES
