

There's strength in our numbers.

Now, planting the strongest corn program possible is easy. Just use the new Performance ProfileSM system to compare the characteristics of different Pioneer[®] brand hybrids. Then plant the set of them that best fits your growing conditions and management practices. Look over the hybrids recommended for your area. And see for yourself how strong our numbers are.

3343-NEW 3343 is on its way to being the next great hybrid. As one of the highest-yielding hybrids in the line-up, 3343 responds readily to top management. It has strong roots and stalks for dependable standability, and its strong seedling vigor lends itself to early planting and reduced tillage. And with good tolerance to common leaf diseases, 3343 is a standout in the hybrid field.

3379-NEW This exciting, high-performance hybrid is destined to set new standards for yield in its maturity. It's a consistently high yielder in good weather and bad; the moderate height and strong standability of 3379 make it a stable performer. 3379 ranks at the top of its maturity group for stay green and has excellent drought stress tolerance and dry down. If you're looking for record yields, this may be the hybrid to help you do it.

3475 Even though 3475 has only a 114 day maturity and is a short plant, it often outyields many hybrids of later maturity. Plus, it also offers very good tolerance to drought, resists leaf diseases like Northern Leaf Blight and Eyespot, and produces strong stalks and sturdy roots. 3475 is still one of the top hybrids in this area.
