

Ford New Holland Offers One-Pass Seedbed Conditioner

NEW HOLLAND (Lancaster)
— The new Model 214 seedbed conditioner from Ford New Holland is a conservation implement for one-pass spring seedbed preparation. At the front, 18-inch discs spaced seven inches apart

slice through crop residue to avoid plugging. Discs can flex over rocks or other obstructions. The discs are followed by C-shanks or S-tines to till and mix soil and residue to avoid planting problems. A flexible spike-tooth har-

row smoothes out the seedbed to eliminate the need for multiple passes.

The new Model 214 is designed for use on fall-chiseled fields but also can be used on moldboard plowed land or on untilled cereal

grain stubble where straw has been chopped and spread at the combine.

The "214" is an ideal companion unit to the Model 139 soil keeper, says Product Manager

Dave Bohannon. Where the "139" was used in the fall, the new "214" is available in working widths from 12 to 35 feet. Wider units fold vertically to go through narrow gates and for road transport.

GEHL

World Class Performers

Gehl's elite Skid Loaders, the 3510/3610, boast efficiency, convenience and comfort. Featuring the super simple T-bar controls in a split, side-mounted position, you can choose from a reliable, fuel efficient diesel or industrial gas powered engine. The model 214 seedbed conditioner from Ford New Holland is a one-pass spring seedbed maker for land that was chisel plowed in the fall. Eighteen-inch discs up front slice through trash while C-shanks or S-tines follow for tillage. An optional spring-tine harrow attachment smooths and finishes seedbeds and incorporates chemicals.
