

Yetter Presents NH3 Shank

The easy, economical, practical way to provide mini-till service while applying NH3 is to use disc-chisel couplers with shanks. Yetter has models available for any mounting system, front or rear. Simply mount the couplers ahead of applicator shanks. Spring cushioned and adjustable with sealed bearings, the couplers cut through trash and ease the way for a variety of implements and provide greater efficiency from existing horsepower. For more information, contact Yetter Manufacturing Co., Colchester, IL 62326; 800/447-5777.

This pull-type rake from Worksaver is designed for use in landscaping, soil preparation and leveling, and maintenance jobs.

Worksaver Pull-Type Rakes Feature Versatility

LITCHFIELD, IL. — Worksaver, Inc. now is manufacturing pull-type landscape rakes that can be used for landscaping, soil preparation and leveling, and maintenance jobs.

The rugged rakes are ideal for grading, leveling, spreading top soil, removing stones, roots and trash, breaking up sod clumps, spreading stone, gravel or cinders, and smoothing ball diamonds, parking lots and horse exercise yards and a variety of other landscaping jobs. The rakes are maneuverable permitting close work around fences, walls and other objects and are designed for 10 to 22 hp tractors. Engineered with an adjustable clevis-type hitch, the rakes fit most tractor hitch points.

Other features include five angle positions, heavy-duty 5/16x1-inch heat-treated tines, pneumatic tires on transport/gauge wheels, and an easy-to-reach lever that allows adjustment from tractor seat.

An optional, retractable grader blade assembly locks out of the way when not in use. Constructed from 1/4-inch steel, the grader blade has bolt-on end plates permitting the blade to be used for leveling.

The pull type rakes are available in 5- and 6-foot models.

For more information contact Worksaver, Inc., P.O. Box 1000, South State Street, Litchfield, IL 62056, telephone 217/324-5973.

Pennsylvania Farm Organizations Request Farm, Food Policy

HARRISBURG — Recently the three general Pennsylvania farm organizations, the Pennsylvania State Grange, the Pennsylvania Farmers Union, and the Pennsylvania Farmers Association (PFA) had a meeting of minds and concluded that an ongoing National Farm and Food Policy would unite agricultural interests and benefit the Pennsylvania farmers.

The goal of this National Farm and Food Policy is to have an adequate supply of food with an adequate return to farmers.

According to William H. Ringler, Master of the Pennsylvania State Grange, "The Pennsylvania State Grange, representing 42,000

farm and rural Pennsylvanians, wholeheartedly supports a National Farm and Food Policy." Ringler continued, "This ongoing policy would be for the benefit of all citizens, because they would have affordable food to nourish their families. In return it benefits farmers by allowing a fair price for their products."

William Sturges, Executive Director of the Pennsylvania Farmers Union, stated, "A National Farm and Food Policy with long range goals is the only way we can preserve our environment, protect farm income, and guarantee an abundant supply of reasonably priced food for our nation and for

export. It is time to get politics out of agriculture; we must set our priorities in the best interest of all citizens."

Speaking on behalf of its 23,600 Pennsylvania farm families, Keith Eckel, President of the Pennsylvania Farmers Association, notes that "Improving net farm income and enhancing the economic opportunity for farmers are PFA's most important goals.

For Pennsylvania farmers to survive financially, they need an ongoing National Farm and Food Policy to secure a sufficient living. These Pennsylvania farm organizations believe that an ongoing policy will provide that security.

Business News

The new electronic grinder-mixer scales from Ford New Holland offer improved reliability, durability, and affordability. Livestock rations are controlled accurately. Two models are available as options for the four-model grinder-mixer series.

Ford New Holland Adds Electronic Grinder-Mixer Scales

NEW HOLLAND (Lancaster Co.) — Ford New Holland grinder-mixers are now available with two new electronic scales. The new scales are high-quality units that are more dependable and durable, according to Howard Winey of Ford New Holland. They are also more affordable, he adds. "Touch panel" switches on both scales are covered by a sealed membrane to avoid dust or moisture penetration.

The Model 5 scale offers weight-controlled ration making

for livestockmen who felt they couldn't afford a scale, says Winey. It has a digital back-lit readout screen with separate buttons for tare and net/gross weight plus on/off switches. A touch of the "tare" switch starts the weight reading at zero for each ingredient added to the batch. A touch of the other switch indicates the total weight of feed in the mixer. Rations control is easy and accurate.

The Model 10 scale measures with the same accuracy but offers

additional advantages. Ingredient items can be entered on a numerical keyboard to program a weight alarm and light to alert the operator when the correct amount of each ingredient has been added.

Both scales are mounted in rust-proof cases and are sealed against rain, moisture and dust. They are interchangeable and use the same weighbar system. Both electronic scales offer self-diagnostic testing and low-battery warnings. Operation is reliable, even in freezing weather.

Land Pride Offers Rotary Cutters

ASSARIA, Ks. — Land Pride now offers their new 15 series Rotary Cutters for standard duty work. With working widths of 4, 5 and 6 foot, these cutters are suited to any 60 hp tractor with a Category I hitch. Their one-piece reinforced formed deck provides a rugged cutting platform. A heavy-duty flex hitch is standard equipment; its all steel bracing eliminates the use of chains. The Land Pride Rotary Cutter features a heavy wall arm and a 15 inch laminated tire for its tail wheel. There are two free swinging, heat-

treated alloy steel blades mounted to the sturdy 3/16 inch round pan stump guard. Their high lift design provides the productivity to make short work of the grass and brush that you will encounter. The overall weight of these series 15 Land Pride Rotary Cutters range from 420 to 641 pounds depending on the cutting width. These Rotary Cutters undergo a full range of

safety tests to prove their worthiness of the Land Pride name.

The 15 series Land Pride Rotary Cutters are produced in America and backed by one of America's premier agricultural manufacturers, Great Plans Manufacturing.

For more information contact Land Pride, PO Box 218, Assaria, KS 67416; 913/667-4755.

Suited to any 60 horsepower tractor, this rotary cutter has two free swinging, heat-treated alloy steel blades mounted to the sturdy round pan stump guard.
