## ARE YOU LOOKING TO UPDATE YOUR WATERING SYSTEM?

# Big Dutchman.

POULTRY FLOOR WATERING SYSTEM FOR BROILERS, BREEDERS, TURKEYS OR DUCKS

### NIPPLE DRINKER FEATURES

- Day-old birds can activate the valve from any side, any angle (Mini drinkers required only if birds have been debeaked day-old.)
- Triple stainless steel valve seat made to precision specifications. No rubber seats to replace. Drinker operates on low 1/4 lb. pressure. Minimizes wet litter problems.
- Each nipple can serve 15 broilers, 10 heavy breeders or 8 turkeys.
- Drinker mounts on water line saddle by means of a "J" flange. Easy assembly and easy replacement.
- Drinker is easy to take apart & re-assemble. All parts are accessible and removable by simply pulling the cap out of the body.
- New Mini-Trough Drinker available for day old debeaked birds. Attaches to Nipple Floor Watering System, and remains through grow-out period. There is no need to remove the mini-trough between flocks.

### SYSTEM FEATURES

- Water is always accessible, and always clean. The system is completely enclosed. Nipples are self cleaning, and they do not collect dirt. Since the nipple "washes" every time it is triggered, it does not get clogged by feed or feather dust.
- Drier litter is maintained because of the reliable triple seal and low water pressure. There is less spillage and no squirting with this low pressure (1/4 lb. or less) watering system.
- The pressure regulator (30VVR332) can provide and maintain a uniform 1/4 lb. pressure for the entire length of a 500 ft. 1/2 inch plastic water pipe.
- Inspection and maintenance are easy. If a nipple needs replacement, simply turn to disengage the "J" flange and pull the unit out of the "saddle" or pipe connector. The new nipple may be inserted and locked in place by turning to engage the "J" flange. There are no threaded parts, clips or screws.
- Other maintenance tasks are as easy. Leveling may be done by means of adjustment straps on the winch cables. There are no cups, troughs or founts to clean.
- Simple installation for floor systems. Plastic water pipe is clamped to 1" conduit sections, coupled together for continuous support. Conduit is suspended from winch system at 12' (max.) intervals. The 1/2" plastic water pipe clamps to conduit line every 24".
