

# Doebler's Top Seven

## HERE'S HOW I PICK 'EM

by Willard Jones

I'm Willard Jones, Doebler sales manager, with my top picks.

We sell 30 corn hybrids at Doebler's. "But what seven would you recommend first?" I'm asked. That's not easy. Soil, management, weather would come into play here.

Three-ways got lot of thought early on. During the fall sale they sell for \$17 less than super singles. And some years they really crowd'em on yields.

It wasn't easy to pass over 48X, a three time winner in Penn State Commercial Corn Trials.

Or the big healthy 70X-C with its big ears and rank growth.

Here are my top picks. Seven proven bin busters. Healthy. Consistent. Great standup.

All bred and tested right here in the East. And every one a winner:

**DOEBLER 84XP**, 118 days. A top choice—grain or silage. Big ears means big yields. Like 191.4 bushels this fall in a Maryland strip test. Big tonnage fills silo quick. Excellent standup. Healthy. Superior drought rating.

**DOEBLER 75X**, 113 days. Still our top seller. And for good reason. Dozens of 200 bushel yields, including a record 281.6 bu. in PA Five Acre Corn Club. Silage? Old reliable also holds Virginia's silage mark. Great stalks.

**DOEBLER 66XP**, 103 days. A super sheller. No. 2 yield in Cornell's 1988 Medium Maturity Trials, 4.6 and 16.2 bu. head of other 600 series hybrids in our first strip

test results this fall. Shrugs off blight. Easy sheller.

**DOEBLER 57XP**, 97 days. Popped 199 bu. in Cornell's Medium Early Maturity Trials last year, buried old 58X by 19 bu. Two recent yields over 225. My choice north of Route 80. Extra oomph pays off in thin stands and poorer soils.

**DOEBLER 54XP**, 95 days. Great early corn in full season country. Starts quick and stays green. Dark green, that is. Standup outstanding. Solid 202 bu. in '88 Cornell Medium Early Trials, or 15 bu. better than Pioneer's best.

**DOEBLER 35XP**, 83 days. Bill Camerer has made case for the new 33XP. But don't forget this baby. It outslugged 48XE 161.3 to 152.3 bu. in recent tests with 1% less moisture and 5% less down corn. Great choice in early country.

**DOEBLER 28XP**, 78 days. Now you have it. A big sheller for early high country. Healthy. Sturdy stalks. 141 bu. in '88 Cornell trials, five more bushels and five less points moisture than 48XE. Class of our 200 series.
