Alfalfa

NC+ JADE New -
Outyields the competition.
- High leaf to stem ratio.
- Higher than average T.D.N.
- Excellent broad spectrum disease resistance.
- Widely adapted, even to wet soils.
- Breaks dormancy in early spring.
- Rapid harvest recovery.

NC+ VERTA+
- High yielder
- Very good winter hardiness
- Tolerant to antracnose, phytophord, root rot and all three wilt diseases.

Corn Hybrids

NC+ 5891 - Superior root strength, stalk quality and ear retention
- Top yields under stress or ideal conditions when population and management are matched to growing conditions
- Healthy, medium-tall plants have good disease tolerance in humid areas
- High quality grain approved by food corn processors
- Good ear "flex" for top yields in low or high populations

NC+ 5990 - Top yield potential at moderate to high population
- Exceptionally good plant health through the growing season
- High quality grain — approved by many food corn processors
- Fast grain drydown Early harvest option in southern food corn areas
- Excellent standability, ear retention and root strength
- Ear "flex" adjusts to population vanation

NC+ 3813 New - Very good tolerance to moisture stress
- Medium-short plants stand well at harvest
- Girthy ears Rapid grain drydown
- Doesn't require high populations for good performance
- Excellent root strength and ear retention.
- Adapts well to most environments and cultural practices from east to west coast in its maturity zone

NC+ 6414 - Very high-yielding mid- to full-season hybrid
- Relatively tall plants, very good standability
- Excellent plant health — good tolerance to CLN
- Very good tolerance to heat and drouth stress
- Long, slender, deep-kerned ears Have a good husk cover
- Responds well to good management and high populations
- High test-weight grain

Soybeans

NC+ Y363 - An early, yellow grain sorghum
- Maturity is about two days later than NC+ 160 and plants are not as tall.
- Very good "yellow hybrid" performance
- Excellent tolerance to heat, drouth and stalk lodging
- Uniform plants have very good eye appeal
- Semi-open heads have good exsertion

NC+ 271 - The "original" cream colored sorghum sets the standard for all other creams
- Excellent standability, even after frost
- Grain is very digestible and palatable
- Excellent exsertion and threshability
- Excellent, late-season plant health for past-harvest grazing

NC+ 371 - This cream colored sorghum merits strong consideration on a high percentage of your acres
- Like NC+ 271, grain is high in feeding quality
- Has improved drouth tolerance
- Short, uniform plants with excellent standability

Grain Sorghum

NC+ 3L47 Mid Group III This widely-adapted soybean proved to have high yield potential in its first year on the market. NC+3L47 has uniform plants with a unique intermediate pubescence color. It shows excellent emergence and standability, and has above average Phytophthora tolerance.

NC+ 2M58 Mid Group II NC+2M58 is a new Group II variety with excellent yield potential. About two days earlier than Century 84, NC+ 2M58 has strong emergence and develops plants with a relatively narrow canopy and good standability. Performs well in narrow rows. Very good tolerance to Phytophthora root rot.

NC+ 2K86 Late Group II This Late Group II soybean has high yield potential. Its medium-height plants resist shattering and provide good fall standability. NC+ 2K86 is field tolerant to Phytophthora root rot. Appearance in the field is similar to NC+ 2D90+. Adapts well to narrow row plantings.

NC+ 1L81 Mid-Late Group I This high-yielding soybean is especially adapted to early-maturity zones. Its standability and tawny pubescence provide excellent eye appeal. NC+ 1L81 has very good tolerance to Phytophthora and iron chlorosis, and excellent tolerance to metribuzin herbicides.

NC+ 2K40 Mid Group II Adaptable to narrow rows, NC+ 2K40 is a Mid Group II soybean with high yield potential. Best when planted shallow because of its short hypocotyl, it will stand up well for harvest. Plant health is good, with above average scores for tolerance to Phytophthora root rot, iron chlorosis and metribuzin herbicides.
