Farm Credit Promotes Staff

SHOEMAKERSVILLE (Berks Co.)—Gery J. Fisher, a native of Oley, Berks County, has been recently named Vice President of Credit for the Eastern Division of Keystone Farm Credit, ACA.

After graduation from Oley Valley High School, Fisher attended Delaware Valley College where he earned a bachelor of science degree in horticulture in 1970.

Fisher joined Farm Credit in 1984 as Branch Manager of the Shoemakersville branch. Prior to that, he was Agronomy Department Manager for the Montgomery-Bucks Farm Bureau in Souderton. In his new position, Fisher will be responsible for all credit and appraisal functions in the Shoemakersville and Hegins branches; he will be working out of the Eastern Operations section of Keystone Farm Credit, in the Fogelsville office.

A member of the Berks County 4-H Development Board, Fisher is also Chairman of the Public Relations Committee for the AgriBusiness Committee of the Berks County Chamber of Commerce.

David R. Stutzman has been promoted to Branch Manager of the Shoemakersville office, filling the position vacated by Fisher. Stutzman graduated from Kutztown High School in Berks County and from Kansas State University in 1982 earning a bachelor of science in agricultural economics.

Stutzman began his career with Farm Credit in 1982 as a field representative in the Fogelsville office. He was promoted to loan officer in October 1983, senior loan officer in May 1985, and to executive loan officer in May of this year.

A member of the Hopewell Church in Fleetwood, Stutzman resides with his wife, Joy, and two children on a 150-acre cash crop farm outside of Kutztown which he operates.

WHICH IS IT? A MIXER OR SEPARATOR?

As vertical mixer is filled, materials are lifted and flipped from top of auger. But because of centrifugal force the mixture's heavier particles travel further

and accumulate near cylinder wall while lighter materials (small particles, etc.) fall into center area. Then as the auger draws from batch's center core

(mostly the lighter material) moves downward rapidly, while material near wall hardly moves! What gets recirculated? The lighter products! As batch

is unloaded, center core naturally comes out first. This means that the first material drawn off consists largely of lighter-weight particles. The last

material to leave the mixer is heavier particles which, for all practical purposes have been "mixed" only with other heavy particles.

FOUR GOOD REASONS TO CONSIDER A COMPUTA-BATCH!

ECONOMY — The Computa-Batch can save 15 to 50% in feed production costs over a PTO mixer/grinder. Write for a FREE Cost Comparison Analysis showing your savings with a Computa-Batch.

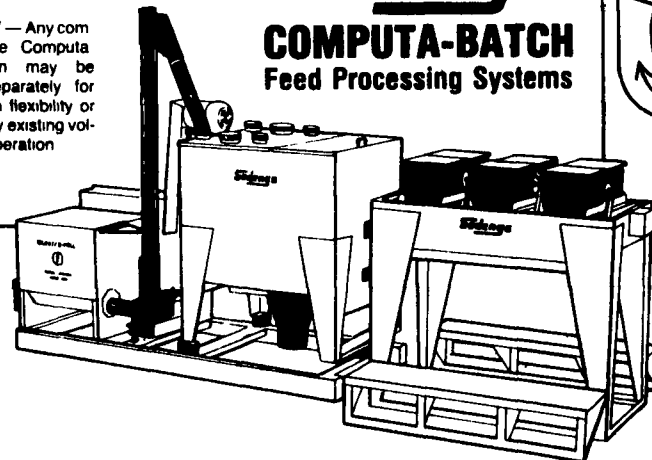

ACCURACY — The Computa-Batch monitors ingredient usage with 99.9% accuracy — no waste of expensive pre-mixes or micro-ingredients. Hammer mills and horizontal mixers provide state-of-the-art grinding and mixing. Special wipers insure total clean-out.

EASY OPERATION — The Computa-Batch has three automatic modes that load, grind, mix and deliver finished feed automatically. The user friendly computer leads you through the operation.

VERSATILITY — Any component of the Computa-Batch system may be purchased separately for greater design flexibility or to upgrade any existing volumetric mill operation.

Feed Processing Systems

Which Is The Mixer For YOU... Horizontal or Vertical?

VERTICAL MIXER

...consists of a tank with its contents recirculated through an upright auger. Actual agitation occurs only in auger which occupies less than one-tenth of the width in a typical 1-ton upright.

HORIZONTAL MIXER*

...turns the whole batch simultaneously, with agitator lifting and tumbling the entire mass up to 15 times per minute. At the same time, materials are circulated from one end of mixer to the other. Has both the room and strength to handle various types of materials, dry or liquid.

* This Is Important When Adding Highly Potent Drugs And Minute Quantity Additives
