"Consider The Concrete Advantages"

The best storage system for high moisture cob corn is a poured concrete SOLLENBERGER SILO, with bottom unloading. The feed can be safely stored at less than 30% moisture, air is effectively excluded limiting mold growth, the silo is equipped with a distributor to keep separation to a minimum which means more efficient unloading and consistent ration. The 6" solid concrete wall reflects heat meaning that heat damage is minimized and feed is kept cooler. Now Is "Decision Time". Make Plans Now To Have Your Sollenberger Silo Erected In Time To Store Your High Moisture Ground Ear Corn.

CONSIDER THE ADVANTAGES OF HIGH MOISTURE EAR CORN
 Farmers who use ground shelled corn rather than ground ear corn when putting up high moisture corn (HMC) are not only leaving the cob in the field, but they are leaving at least \$150. worth of milk per acre of corn in the field.
 These remarks were made by Dr. Howard Larson, noted Mid-Western dairy nutritionist and management specialist.
 Further comments based upon years of research included:
 * Any amount of cob is better than none.
 * It is not economically feasible nor best for the cow to feed high moisture shelled corn.
 * It is not necessary to feed hay to dairy cows.
 When cob is included with the grain, you not only get an extra 10 to 12 percent HMC by weight, but you get better digestibility in your cows. By adding the cob to the ration, you keep a floor of fiber under the total ration and fiber can supply a lot of energy; and you get better rumen action.
