3 SILOS AND UNLOADERS

Have you inspected your silo door system lately?

Failure to perform routine regular maintenance may cause a fall resulting in serious injury or death to you and your employees.

The highly corrosive environment present in a silo chute will result over time in the deterioration of wood, metal and concrete.

A proper safety inspection must include the following:

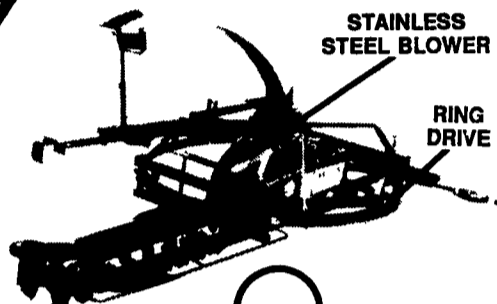

- Wood doors for rot and damage
 - Bolts and bolt heads for corrosion and tightness
 - Door steps for corrosion and damage
 - Latches for corrosion and damage
 - Cast-iron hinge eyes for tightness and corrosion
 - Concrete door frames for deterioration and physical damage
- (Door must be set properly in door frames for latch system to work effectively.)

Lancaster BELT FEEDER AND "NEW" Lancaster CONVEYOR. Modern dairy and beef feedlots can be automated with the use of bunk feeders using "belt feeder" units. Corn silage haylage high moisture corn and other feed material can be distributed quietly evenly and with no separation. A traveling plow unit places the feed directly to the center of the bunk trough. Simple operation and very low horsepower requirements make this Lancaster belt feeder popular with dairy and beef operators. Rubber belt and wooden trough design—keeps silage from contacting or corroding metal.
