1991 BARN PAINTING
 Aim For The Best -
In Coating Film Thickness
 To do it right use the finest kind of bristle brush evening out the coating into a film thickness that does not peel in normal moisture stress (found on most barn siding from outside and inside by livestock or stored animal feed)
 1. **PREPARATION.** Peeling old coatings (improperly brushed) needs to be removed. The best again is simply water blasting or power washing! High volume of water - medium pressure is best! Done professionally or do it yourself, especially on the easy to reach areas
 2. **MAKING A NEW START** spray on brush in painting on the renewed surface or resurfaced wood siding. The above mentioned AIM of coating thickness can prevent future peeling and resurfacing cost & effort. Simple, old fashioned brushing does most of the trick. This film will let moisture breathe through it. Depending on the amount of weather wear it can be recoated lightly in 10 years of more. Southern exposures usually wear faster
