"MAKING GOOD SILAGE"

Probably no other ingredient fed in cattle rations today varies so much in "quality" as silage. It takes common sense, attention to details, and solid management to make good silage.

At least nine factors affect silage quality. Rather than acting independently, they interact to determine silage quality.

"The 9 Factors"

1 The Crop	6. Silo Structures
2 Stage of Growth	7 Feedout
3. Moisture	8 Weather
4. Fine Chopping	9 Additives
5. Filling, Packing and Sealing	

Since 1908, SOLLENBERGER SILOS CORP. has been providing the Silo Structures now in demand by more and more farmers concerned about "silage quality." "Nothing keeps feed better than our poured concrete silos."
