701 E. Linden St., RICHLAND, PA 17087

With a Rigidply Rafter's Laminated Gothic Arch building, you get versatility, economy and quality. First, all of the Gothic Arch buildings' floor space is useful thanks to the arch's high, clear span design. Second, the attractive arches have a shape that naturally resists wind and snow loads in order to provide you with more building area for your money. Third, our Gothic Arches are manufactured with structurally graded wood and bonded together with a waterproof phenol resorcinal glue. Our trained staff closely monitors the temperature, moisture content, relative humidity and pressure of our manufacture process to insure that your next Gothic Arch building order will give you many years of service.

86'x240' FREE STALL BARN

Free Stall Housing Barn

For small and large dairy operations to help minimize condensation, making the barn healthier for your animals. Raised heel and ridge vent helps air flow to improve natural air ventilation. Ventilation is most important for your free stall barn

Our laminated rafters are stronger than ordinary nailed rafters because of our unique finger joint system. The wood is joined one piece to another, along with our unique finger joint and glue system. This equalizes strain and gives uniform load distribution and strength over total length of rafter. Laminated rafters when erected in position, distribute roof load directly to foundation. The arch is aesthetically pleasing for many types of construction and provides more efficient utilization of space.

Bank Barn

For hay and equipment storage above cattle, Rigidply mechanically glued laminated rafters provide a clear span from floor to ridge. No posts or braces necessary. All of the inside area is useful, yet your building has maximum resistance to winds and snow.

**Let us talk over your requirements**

The relative economy of one roofing system over another depends on your own specific job requirements. At Rigidply we have a great variety of laminated and conventional roofing systems available to meet your needs. Along with this product selection, all hardware and heels necessary to erect your building are supplied with your shipment. Deliveries are planned to meet your working schedule and crane service is available for faster delivery and erection to save you time, work and money. We also guarantee all rafters against material defect and workmanship to insure you of your investment. Rigidply rafters result in a stronger and better looking building, too.

Rigidply laminated arch design, we believe, is the best for more air flow which contributes to the life of the barn or structure. The key to this is our continuous ridge ventilation system, which allows air flow throughout the barn. Air enters at the heel area and continues a natural flow of air to the top of the roof. The ridge vent which is located at the top of the roof is designed to be most effective with minimum air obstruction creating a chimney effect of drawing bad air out and fresh clean air in. The roof vent opening is designed to protect the opening from normal elements such as rain and snow. The result is a better building for your needs and a healthier environment for your valued livestock and yourself. Another outstanding feature or advantage with having your building constructed of Rigidply Laminated Gothic Rafters is that there is very little place for bird roosting and nesting. This is very important in helping to keep a clean and desirable place to work on a day to day basis, which means satisfaction.

Fully guaranteed, the perfect shape and accurate size of every Rigidply Gothic Arch results in a strong beautiful building in which you can take much pride for many years to come.
