

Rated first in durability and uniform mixing

In surveys, grinder-mixer owners were asked to list the important factors they looked for when buying a grinder-mixer. "Durability" was the most important feature with "uniform mixing" a very close second. These same owners then rated the various brands of grinder-mixers against these factors.

First in both!

New Holland grinder-mixers were rated first in both categories. That won't surprise you after a quick inspection. You'll see tough, rugged construction—the type of construc-

tion that leads to years of dependable service. Inside you'll find a rugged hammermill and mixing auger for the kind of uniform mixing you'd expect from the industry leader.

Four models— 80 to 150 bushels.

New Holland mills come in more sizes than any other line. And with a host of attachments and options, it's easy to "custom build" the grinder-mixer best suited for your operation. Choose a model with either 540 or 1,000 rpm PTO. On some models you also choose either mechanical or

hydraulic drive. There are three loading options—plain feed chute, loading auger or power bale feeder. The choice is yours. Regardless of the model and its options, you'll be assured of a grinder-mixer that delivers durability and uniform mixing . . . the two most important features that separate New Holland grinder-mixers from all the others.
