AUCTION CLOSED FOR THE SEASON. THANK YOU FOR YOUR PATRONAGE. HAVE A HAPPY HOLIDAY. AUCTION REOPENS EARLY MAY.

New York Farm Milk Price: \$13.01

NEW YORK — Dairy farmers who supplied milk plants regulated under the New York-New Jersey marketing orders during October 1991 will be paid on the basis of a uniform price of \$13.01 per hundredweight (28.0 cents per quart).

The price for the corresponding month last year was \$13.10 per hundredweight. Market Administrator Ronald C. Pearce also stated that the price was \$12.45 in September 1991. The uniform price is a marketwide weighted average of the value of farm milk used for fluid and manufactured dairy products.

The seasonal incentive plan has been suspended for 1991. For October, the plan would have added to the uniform price value 30 percent of the total monies that would have been deducted during

the spring months.

A total of 12,473 dairy farmers supplied the New York-New Jersey Milk Marketing Area with 889,998,509 pounds of milk during October 1991. This was a decrease of .02 percent (about .2 million pounds) from last year. The gross value to dairy farmers for milk deliveries was \$117,571,680.54. This included differentials required to be paid to dairy farmers but not premiums, deductions authorized by the farmer, or assessments.

Regulated milk dealers (handlers) used 391,226,264 pounds of milk for Class 1, 43.9 percent of the total. This milk is used for fluid milk products such as homogenized, flavored, low test, and skim milks. For October 1991, handlers paid \$13.92 per hundred-

weight (29.9 cents per quart) for Class I milk compared with \$15.64 a year ago.

Handlers used 141,971,792 pounds of milk for Class II products, 16 percent of the total. Class II products include fluid cream, eggnog, cottage cheese, ice cream, and yogurt. Handlers paid \$12.37 per hundredweight for this milk.

The balance (356,800,453 pounds or 40.1 percent) was used to manufacture Class III products including butter, cheese other than cottage cheese, and dried milk. Handlers paid \$12.56 per hundredweight for this milk.

The uniform price is based on milk containing 3.5 percent butterfat. For October 1991, there was a price differential of 10.8 cents for each one-tenth of one percent that the milk tested above or below the 3.5 percent standard.

All prices quoted are for bulk tank milk received from farms in the 201-210 mile zone from New York City.

Md. Ag Dept. Announces Pesticide Training

ANNAPOLIS, Md. — Maryland Secretary of Agriculture Robert L. Walker announced the publication of two pamphlets which list a complete schedule of private pesticide applicator recertification training sessions and examination dates for the remainder of 1991 through March, 1992.

The University of Maryland System Cooperative Extension Service conducts the training sessions. Private applicators are farmers and other individuals applying restricted use pesticides to their own land or rented land for the purpose of producing agricultural products. Private applicators must be recertified every three years.

"Our job at the Maryland Department of Agriculture is to make sure farmers apply pesticides in a judicious and an environmentally sensitive manner. In cooperation with the University, our pesticide regulation staff develop training materials for the county agents to use for both initial and recertification training sessions," Walker said.

There are more than 4,500 certified private pesticide applicators in Maryland. In addition, there are approximately 2,400 commercial pest control applicators who are certified annually by the department.

For more information, or to obtain the pamphlets on private applicator training and testing schedules, contact the Maryland Department of Agriculture, Pesticide Regulation Section, 50 Harry S. Truman Parkway, Annapolis, MD, 21401, (410) 841-5710.
