HANOVER (York Co.) — Finch Services-Hanover recently earned recognition from John Deere for achieving its goal in John Deere's Bypass Start Safety Program.

Brad Finch (co-owner) accepted the award on behalf of Finch Services-Hanover from Dave Kastler, area service manager of John Deere, during a presentation ceremony at the dealership recently.

"Customer safety is very important to us here at Finch Services. We believe that any safety program offered by John Deere will benefit our farmer customer such as the Bypass Start Safety Program," said Brad Finch.

The program is part of John Deere's effort to educate customers about the danger of bypass starting. Bypass starting is a general term for any starting method that bypasses the safety features designed into the starting system or departs from the proper starting procedure. Examples include shorting across the starter solenoid with a metal object and starting the tractor with a key from the ground.

"Bypass starting is a dangerous practice because it places the operator on the ground in front of a drive wheel of the tractor. If the operator bypass starts the tractor while it's in gear, he will likely be run over," said Brad Finch.

Brad Finch said that bypass starting is not unique to a particular brand or type of tractor. He urged all tractor operators to fol-

low the correct starting procedure outlined in the operator's manual and never attempt to bypass-start a

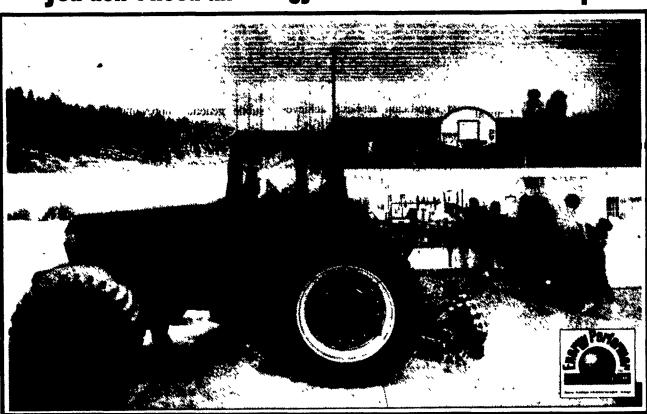

John Deere's Bypass Start Safety Program involves most John Deere tractors built since 1960. The program calls for John Deere dealers to install a safety-start kit (starter solenoid cover and bypass start warning decal) on every qualifying tractor in their service areas and inspect the tractor's starting system. There is no charge to the customer for the kit, installation, inspection, or travel time. Those dealers who completed 100% of their assignments by a certain date were recognized by John Deere for their efforts.

"There still may be some tractors or owners we have been unable to identify," said Brad Finch. "If this is the case, we urge these individuals to call the dealership immediately so we can schedule a technician to install a free safetystart kit and conduct a free inspection of the starting system." The telephone number to contact Allen (service manager) is (717) 632-2345.
