Soybean Growers, Feeders Will Meet

MILLERSTOWN (Perry Co.) — Soybean producers and those who feed soybeans to dairy livestock are invited to attend a soybean growers and feeders meeting sponsored by Cooperative Extension of Perry, Juniata, and Mifflin counties.

The program will include a farmer panel discussing their costs of production, growing, feeding, and marketing strategies. The program will also include discussion of soybean herbicides for specific rotations, the use of soybeans for a hedge against drought, and an economic outlook on future soybean prices, world and national stocks, and fall protein prices.

The meeting will be held at Benner's Restaurant, midway between Thompsettown and Millerstown along old Rt. 22. The meeting will begin at 9:45 a.m. and conclude promptly at 2 p.m.

Reservations for the meeting and the \$7 family style meal of roast beef and turkey can be made by calling the Perry County extension office at (717)-582-2131, ext. 244.

Dr. Richard Adams, Penn State extension dairy nutritionist, will present a talk on feeding raw, roasted, and processed beans to dairy animals. Dr. Elwood Hatley, Penn State extension agronomy specialist, will be discussing planting and growing tips to assure maximum yields.

John Yocum, director of the Penn State Landisville Research

Farm in Lancaster County, will be discussing soybean herbicide programs. Dr. Greg Hanson, a midwestern farmer who recently joined the Penn State extension staff as an ag economist, will be discussing trends in soybean production and inventories, and what those trends indicate for future prices.

A farmer panel, made up of farmers from Perry, Juniata and Mifflin counties, will be discussing growing, feeding, and marketing soybeans. Ray Byler, Mifflin County, will be discussing his cost of production. Byler raises 500 acres of soybeans annually. George Schreiber, Perry County, will be discussing roasting home grown soybeans with a portable roasting service and feeding those beans to hogs and beef. Melvin Martin, a dairyman from Juniata County, will be discussing using his home grown beans in his dairy rations.

The meeting will qualify for category 01 pesticide license update credits. For more information on this meeting, call the cooperative extension office in your county.

To Jump-Start Feeding Efficiency, Think Custom Farm Seed Waxy Corn Hybrids.

It's no secret that digestible starch content in corn is the single ingredient that aids in the production of increased milk in dairy animals and faster weight gain in livestock. Experts say up to 25% more.

Regular dent corn is composed of a combination of 75% Amylopectin starch ... the more digestible starch ... and 25% Amylose starch ... the less digestible starch.

CFS waxy is 100% Amylopectin starch. That means 25% more digestible starch is available for your operation.

Think about this CFS waxy for 1992 ...

CFS W7551 (111-115 RM) ... Vigorous growth ... Excellent yield potential ... Good stalk quality ... Excellent drought tolerance.

PARS, Inc. markets Custom Farm Seed throughout the Eastern United States. In addition to waxy hybrid corn, count on PARS for a complete line of CFS seed, including **break-thru**® alfalfa, soybeans and hybrid seed corn.
