Accurate and precise in no-till fields, too.

New Idea 9000 series planters have gained a well-deserved reputation for planting with incredibly accurate spacing at precisely the right depth in min-till, no-till or conventionally tilled fields. Our short 18" aerodynamically designed seed drop and independently acting walking beam gauge wheels see to it.

And our low-pressure, air metering system and

edge drop seed disc singulates seeds—corn, soybeans, cotton, sorghum, milo, sweet corn, popcorn, sugar beets—to avoid doubles or skips.

Best of all, our double bar model provides plenty of weight and room for many combinations of our numerous no-till coulters and other attachments.

thinking. The values we hold dear as Christians are being undermined and our children are being undernourished. Do let your voice be heard and let the State Board of Education know that our children need to learn things that will help them to grow up to be productive members of our society, that will prepare them to find work and raise healthy productive children of their own someday. Our children don't need "cotton candy" educations but something they can really sink their teeth into. We need to get back to the basics of education, the three "R's" and the building up of the traditional values that have made our nation great.
