1992 BARN PAINTING SPRAY & BRUSHING

To farm building owners — Under today's farm economy it is time to reduce maintenance frustrations.

Do you remember of hearing of barn painting of approximately 75 years ago that it stayed nice longer? lasted 25 years?

Observation #1 In recent years many of these good old barn surfaces have been ruined by over-coating, poor preparation and application, lack of controlled paint placement and film thickness. The time is coming to salvage our buildings (a) Start over (b) Water blast (c) RESURFACE (d) Use solid stain to penetrate on bare spots! (e) Second coat with a breathing film thickness (f) Brush out in all directions with finest of bristles.

Really it is not as complicated as the recent changing regulations on clean milk production, or wet soils, or zoning. It is also less expensive than other barn painting experiences!

Observation #2 Colored water (latex) is less desirable for farm buildings. There is a long list of reasons for this.

Observation #3 Today's painted metal siding and roofing has a remarkably short life. Bad alloy or metal. There might be another list of reasons for this. To save it at reasonable coating cost - timing is important.

Observation #4 Today's wood selection for siding etc. is also poor. How about recycling building material?
