SWATHER'S CHOICE

ALFALFA HAY CONDITIONER

NEW!

Alfalfa and other legume crops have a coating of wax. While this coating is a natural protection for the growing plant, it is an inhibitor to moisture loss in field curing and to feed utilization in the digestive system of ruminant animals. The presence of this coating of wax also makes the hay stem brittle and less palatable to livestock.

Swather's Choice "washes off" the outside waxy coating of alfalfa, allowing for the water inside the plant to evaporate more rapidly than in untreated hay. Swather's Choice is actually a soap that is safe for livestock consumption and won't affect palatability.

In studies at Michigan State University, hay treated with the ingredients in Swather's Choice had higher protein and lower fiber. In a further study at Utah State University, cows consumed 2.2 pounds more treated hay per day.

Unlike conventional granular drying agents, Swather's Choice is a liquid chemical hay conditioner. It is easily tank mixed with water and requires only fifteen gallons per acre in most applications, compared with the conventional products that are normally applied at 30 gallons per acre.

LIQUID CHEMICAL HAY CONDITIONER FOR DRYING ALFALFA HAY IN 1/3 LESS TIME
