

## The Two-in-One Hybrid 107 Days

A107 is what we call a "two-in-one" hybrid combining the yield of fuller season hybrids with the drydown preferred in medium season hybrids. The result . . . higher yields with lower drying costs. Ideal for early planting and no-till farming, A107 has fast emergence and exceptional seedling vigor. This adaptable hybrid stands up well to heat and drought stress. And, A107's standability and exceptional ear retention let you harvest when you are ready.

**\$44.00/bag with an order of three or more hybrid numbers.**

## Top Producer 107 Days

Here's a genetically diverse partner for Fielder's Choice A107 and E109 which was developed especially for the soils and growing conditions of the central and western Corn Belt. The flexible ear of 8107 responds positively with high yield potential to good management and lower plant populations. Its long, slender ears typically feature 12 to 14 rows of large, dense kernels that dry down exceptionally fast after 25% moisture.

*"I like the concept of the distribution center 1 mile 1/2 miles away from one end it's real handy."*

*"I had planted some E109 in a field with a couple other varieties. The E109 didn't drop its ears like the others did. That's where the yield advantage was. When I was disking at the end of the row, I could tell the row where E109 was because other varieties were dropping their ears and I could see it."*
