YOUR 1993 PLANNING NOW!

Whether your harvesting needs call for rotary or conventional combines, Massey Ferguson offers the best in both. Ask anyone who's seen them in action at farm shows, fairs and other competitive demonstrations around the country... Massey Ferguson combines consistently lead the way with top harvesting performance. MF combines have the edge in clean grain samples, fuel efficiency, operator comfort, reliability... just about every serious measurement you consider to evaluate the best combine for your specific needs. It's what you'd expect from the company that invented the self-propelled combine nearly 55 years ago, and has been a leader ever since.

MASSEY FERGUSON

Commitment to excellence.

The world's leading harvesting specialists.

MASSEY FERGUSON developed the world's very first, commercially available, self-propelled combine in 1938.

Since then it has built more than 150,000 combines for U.S. and Canadian farmers. This makes MF a leading combine producer in North America.

During this time MASSEY FERGUSON has earned the respect and preference of the most demanding users. The widely popular MF 800 Series combines, for example, are still in high demand and command top dollar on the used combine market.

CLAAS of Germany, meanwhile, is the undisputed combine leader in Europe and many other parts of the world. It has produced more than 350,000 combines for use all over the world.

As a result, CLAAS combines have been perfected to harvest an amazing range of crops under the most severe conditions imaginable. This global diversity has resulted in combines that are unsurpassed for threshing ability and reliability.

Thanks to truly global operations, CLAAS is able to gather practical field experience twelve months a year. This dramatically shortens the time it takes to bring a first concept through to finished new product.

The best of both worlds.

MASSEY FERGUSON and CLAAS enjoy a richer heritage of accomplishments and successes than any other farm equipment company.

For nearly thirty years, more farmers, worldwide, have chosen MF tractors than any other brand by a wide margin. The reasons for this immense popularity start with outstanding products, of course. But they also include outstanding product service and support.

The MASSEY FERGUSON organization also understands the unique needs of North America farmers. Regional MF Business Units put product and marketing decisions closer to its customers, and make MASSEY FERGUSON more responsive to customers' needs.

Across the ocean in Germany, CLAAS is the world's undisputed leader in the design and production of combines and other harvesting equipment. Its manufacturing plants are modern and efficient, incorporating the latest in technology.

Its labor force is well organized and highly skilled. As a result, CLAAS products are setting new standards for consistent quality control and reliability.
