

# For me, the test of any alfalfa is how many pounds of nutrients per acre it produces.

I'm as interested as the next guy in what researchers are doing to improve the alfalfa varieties on the market today. But sometimes, I think seed companies forget that more leaves or better disease resistance by themselves don't produce more milk. The bottom line is pounds of nutrients per acre.

That's why I plant **Multi-plier** alfalfa from Jacques. Sure it's a multileaf and has good winter-hardiness and terrific disease resistance. But all that says to me is that **Multi-plier** has the potential to produce more pounds of nutrients per acre on my farm.

I look at my corn silage hybrids the same way. So I also plant a lot of **7970** from Jacques. Yes, it's big and leafy and yes, it makes a lot of grain and fits my operation. But my analysis only measures total digestible nutrients and that's what I'm looking for.

I'm open to new alfalfa varieties and silage corn hybrids, but only if they'll deliver more pounds of nutrients per acre than my Jacques' **Multi-plier** and **7970**.

corn • soybeans • alfalfa  
sorghum • sunflowers
