American agricultural exports," said Larry Case, national FFA advisor and coordinator of agricultural and rural education, U.S. Department of Education. "This is an excellent opportunity for our future agricultural leaders to learn about the issues and challenges which face American agriculture, and, indeed, all sectors of American business and industry."

The six young people are the 1992-1993 national officers for the National FFA Organization. During their time in Japan, they received a briefing by U.S. Embassy officials on agricultural trade, toured a large fish, vegetable, and floral marketing facility, and visited a horticultural high school.

In addition, the group toured the facilities of Mitsui & Co. Ltd. Tokyo, as well as a number of agricultural businesses and historical landmarks in Kyoto and Tokyo. The officers met with their Japanese counterparts—members of the Future Farmers of Japan (IFJ)—to further extend contacts between the next generation of agricultural leaders for both countries. Each officer stayed with a Japanese host family for one weekend to learn more about the culture and traditions of one of the United States' most important trading partners.

The international program is sponsored by Mitsui Grain Corporation and Mitsui & Co. Ltd.

Tokyo as a special project of the National FFA Foundation, Mitsui Grain Corporation is based in Chicago, Ill. The headquarters for its parent company, Mitsui & Co. Ltd., are in Tokyo. Mitsui has sponsored the tour for 14 years.

"If the United States is going to remain competitive in a global economy, we must begin to appreciate the culture, practices and policies of our international trading partners," said Travis Park, national FFA president. "During our year of service, the national officers will have the opportunity to share what we learn on this tour with hundreds of thousands of our fellow members and U.S. agricultural leaders."

The national officers travelling to the Far East were Travis Park, national president from Franklin, Ind.; Kevin White, national secretary from Redding, Calif.; Rick Perkins, eastern region vice president from Bloomville, Ohio; John Kleiboeker, central region vice president from Stotts City, Mo.; Todd Hingson, southern region vice president from Live Oak, Fla.; and Dennis Degner, western region vice president from Malone, Texas. Accompanying the officers were C. Coleman Harris, executive secretary, and Jeri Mattics, communications consultant, both of the National FFA Organization, Alexandria, Va.

Nut Tree Grafting Workshop Set

DAUPHIN (Dauphin Co.) - Interested in harvesting edible nuts from trees you've cultivated on your own property?

Plan to attend the annual nut tree grafting workshop from 9 a.m. until 12:30 p.m. on Saturday, March 13 at the Dauphin County Agriculture and Natural Resources Center.

The center is located two miles north of the borough of Dauphin, on route 225 between Clark's Creek and Peters Mountain.

The workshop, conducted by Jay Book and Tucker Hill of the Pennsylvania Nut Growers Association, will give hands-on experience in grafting.

Grafted nut trees begin to produce earlier than seedling trees and usually bear superior quality nutmeats. Many species of walnuts and two of hickory are native to Pennsylvania, but few people know that an abundant variety of nut trees are capable of producing in Pennsylvania.

There is no charge for the workshop. Scionwood and grafting supplies for grafting will be available for a small fee, and a few trees will be offered for sale following the demonstration.

For more information, call (717) 921-8100.

TOP 10 REASONS WHY YOU SHOULD **BUY A**

TANCO

TANCO

 ${f 1}$. Five (5) points of support on turntable: Competition uses one Four heavy duty rollers add stability and support to the perimeter of the turntable in addition to the main central shaft. This allows Tanco wrappers to safely wrap the heaviest silage bales on rough or uneven ground.

2. Single solid belt on turntable: The single belt enables Tanco wrappers to effectively wrap misshapen or soggy bales providing a positive surface for bale rotation.

3. Adjustable extendable axie: On trailed Competition must add models the extendable axle provides a wide, stable wheel base when loading bales. Eliminates the need for counterweights.

4. Top rollers on turntable: Extra rollers provide security to keep bales in place when wrapping at high RPM's (25) or on uneven terrain.

5. Unloading ramp on trailed models:
The ramp allows bales to be unloaded gently. When a wrapped bale falls hard it can "burp". Once it "burps" the bale does not re-seal. The ramp gives a smooth transition between the ground and turntable.

6. Turntable braking System: When unloading wrapped bales its important that the turntable doesn't move out of position. A twisted turntable can offload a bale crooked, exposing it to possible tearing of plastic on frame parts. Tanco machines are equipped with a braking system that holds the turntable in place when unloading

interested customers.

SEEING'S BELIEVING:

We welcome pre-season demonstrations to

Contact your local dealer to arrange a demo

and more information on Tanco wrappers.

COMPETITION

central shaft to support the entire turntable mechanism.

Competition uses either no belts between rollers, or multiple belts which can allow bales to sag and slip.

counterweights or tandem axles as options to effectively handle silage bales.

Competition - None.

Competition - optional drop mats are available.

Competition - either no system, or rely on hydraulics to hold the turntable.

7. Film indexing system: As temperature rises, plastic stretches more. To ensure proper overlap and complete coverage when it's hot outside, Tanco machines are equipped with an exclusive, simple, indexing system to compensate for those times. The operator can eliminate potential windows" in the wrapping procedure.

8. Positive bale positioning: while being wrapped, bales are rotated the exact distance required to obtain optimum coverage.

9. <u>Durability:</u> Tanco's subframe is the heaviest of any machine available in North America. The low profile design keeps silage bales closer to the ground with a low center of gravity for stability.

Tanco's features are the result of years of experience and input from hundreds of individual, and commercial users in Europe.

10. Prices: From a basic 3 point Model AW200, to the trailed Model AW400 with automatic cut & start, bale and batch counter, and tractor seat controls, Tanco prices for 1993 are lower than ever. Pay less for more features and durability than any other bale wrapper on the market.

COMPETITION

Competition - None.

Competition uses continuous hydraulic advance. Baies can slip or over-rotate giving an uneven wrap.
