

High-Residue Field Cultivator For Large Operations

HUTCHINSON, Kan. — Krause Corporation recently announced the introduction of a giant five-section field cultivator, the 5650 Series. Offered in 47 foot - 62 foot sizes to match the needs of large operations, the 5650 fills a need for a large heavy-duty field cultivator that was designed to handle high-residue conditions when preparing seedbeds or incorporating herbicides.

Five bar main and wing frames feature a residue-tolerant 125 inches of fore and aft clearance. New heavy-duty two-piece K-Tines, standard equipment on the 5650 Series, provide 25 inches of underframe clearance for optimum residue flow through. The two-piece K-Tine features a rugged 1/2 inch x 3 inch upper leaf spring area and a high side loading strength to prevent the shank from "walking" around large weeds. Standard shank spacing is 9 inches to provide im-proved residue flow through and preserve more residue on the soil surface. Minimum side-to-side shank spacing of 36 inches on 9 inch spacing or 24 inches on 6 inch spacing ensures ample residue clearance. Six-inch shank spacing and/or spring cushioned C-Shanks are optional on the 5650. Spring cushioned C-shanks, with a 9 inch trip height,

are a good choice for rocky field conditions.

A positive mechanical depth control system eliminates unwanted depth change problems due to hydraulic cylinder leak-downs associated with single-point depth control systems. Depth control and side-to-side leveling is accomplished on each section with a quick and easy-to-adjust hand crank.

Main and wing frame construction is of rugged 3 inch x 4 inch steel tubing. Tongue beams are massive 4 inch x 6 inch tubing to handle tough field conditions. Walking tandems on the main frame and wings provide excellent field flotation. Main frame tire size is 12.5L x 15 inches and wing frames 9.5L x 15 inches.

The five-section 5650 Series Field Cultivators feature overcenter fold for easy road transport. Transport width is 19 feet 9 inches on all models. Model 5648 features a transport height of 14 feet and Models 5654 and 5660, 16 feet 11 inches.

Finishing attachments include a 3-row tine or 3-row spike harrow to provide planter-ready seedbeds.

For complete information, contact Krause Corporation, P.O. Box 2707, Hutchinson, KS 67504-2707, (316) 663-6161.

White-New Idea/Allied Products Refinanced

COLDWATER, Ohio — White-New Idea has announced that their parent company, Allied Products Corporation of Chicago, has reached agreement with its secured lenders in the restructuring of its senior secured debt.

The restructuring provides a multi-year arrangement for the remaining funded debt held by current lenders. Part of the restructuring involved realigning two divisions into wholly owned subsidiaries which have separate funding.

The multi-year refinancing agreement is a major step after previous extensions of shorter

duration. White-New Idea President Rod Cooper sees this as extremely positive.

"As the largest division of Allied, we are very pleased with the multi-year arrangement," said Cooper. "We have been performing well, achieving our projections consistently month after month. Starting 1993 with good news of refinancing adds to the other positive signs we see for the year. Our equipment sales projections are positive while being realistic. The attitude of farmers at the recently completed winter shows is also encouraging."

Are You Robbing Your Forages Of Valuable Nutrients?

Protect Your Forage Investment With SILO SYM

"Your Forage Guardian"

- a natural product containing no harmful chemicals or aids
- allows you to bale hay at up to 28% moisture and still maintain safe storage conditions
- a definite hedge against bad weather
- reduce nutrient losses which occur during harvesting and storage
- enhances forage palatability
- non-toxic to livestock
- higher feeding value, due to less leaf loss
- non-corrosive to equipment
- easily applied with Gandy Applicator
- helps ensiled crops to retain a higher percentage of the original dry matter, energy and other nutrients
- really works on square or round baled hay, haylage, corn silage and high moisture grains
