## New M-F 100-140 hp tractors

# Advanced QUADRAM Power makes a difference you can hear and feel.

Massey-Ferguson is setting the standards for the 90s with three new 100 to 140 hp high-performance tractors that deliver improved engine torque characteristics and fuel efficiency with lower noise levels and lower engine stress.

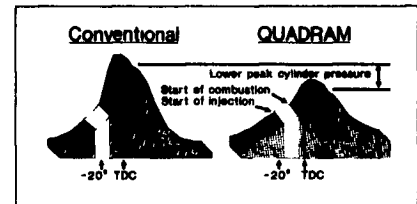

### Revolutionary new engines

The key to quick, smooth, efficient combustion is complete air and fuel mixing.

The Quadram cylinders produce an intense swirl of air for quick and thorough mixing of the fuel and air after injection. As a result, injection can be delayed closer to top-dead-center (TDC).

A unique 4-lobed (QUAD) bowl on the crown of the piston maximizes the amount of air swirl in the combustion chamber.

Lower peak cylinder pressures and stresses result when less combustion takes place prior to TDC.

Perkins 1000 Series engines have a very small amount of combustion taking place prior to TDC. As a result, the engines are more efficient and powerful, with much lower noise and vibration.

You'll notice the Quadram difference right away. The engine runs smoother and quieter — up to 50% quieter than competitive engines.

But the only way you can really appreciate the M-F Quadram advantage is to actually see and hear the tractors perform. So even if you aren't currently in the market for a tractor of this size, you owe it to yourself to see the latest in agricultural engine technology.
