THE CLAAS HARVESTER

MAXIMUM FEED QUALITY

To ensure maximum feed quality from maize it is vital to crack every kernel. Digestion of uncracked maize falls as the maize becomes drier. Independent trials have shown the Claas corn cracker to be close to 100% effective. From the cylinder the corn passes through the two large diameter rollers with saw tooth profiles. The rollers run at different speeds to intensify the grinding effect and open up each kernel. It is a fairly tough process so the latest generation of corn crackers take account of the wear involved on the rollers. Nothing can reduce the wear but Claas have cut the cost of repair by making the outer sleeve replaceable. The shaft, drive pulley and bearings can all be reused which cuts down repair bills dramatically. Adjusting the distance between the two rollers is accomplished by turning two handles, easily accessible behind the cab. In no time at all the degree of cracking can be matched to the ripeness of the crop.

RELIABILITY

The CLAAS Cutterbox is a unique balanced design using 2 knives in a V configuration. This forces the cutting action toward the center instead of the outside. This is the secret of their horsepower requirement and good quality of cut.

The CLAAS® Quadrant 1200 square baler —
The new standard equipment for commercial operators

CLAAS doesn't have to sell a commercial operator on the advantages he gets from large, densely-packed square bales.

Yes, the Quadrant 1200 delivers the density commercial operators want. Yes, its bales inhibit spoilage by keeping the air out. Yes, they preserve quality because they minimize nutrient loss.

The 1200 also offers the high production capacities you demand. Its 4 ft x 2½ ft x up to 8 ft. long bales effectively increase storage space and dramatically increase transport capacities — all at a high productivity rate. And you know what this means to your bottom line.

The Quadrant makes easy work of dry hay, haylage and silage crops — whatever you've got. And it bales as much of it as you've got.

CLAAS's shaft-driven knotters have earned a worldwide reputation for reliability and low maintenance. Other notable features are its 3-stage pre-chamber, 78" wide pickup, powerful transmission, heavy-duty worm gear, 1000 rpm pto, hydraulic density control, capacity for up to 24 balls of sisal or plastic twine, and of course 6 dependable CLAAS shaft-driven knotters.

Production capacity. Convenience handling and storage. Economical transport. Density and quality. A better bottom line.

For more information about the Quadrant and how it can meet your commercial needs, contact the CLAAS dealer listed below.

Incidentally, CLAAS quality is also available in a smaller Quadrant model designed for dairy operators.
